Automated Planning and Acting Malik Ghallab, Dana Nau, Paolo Traverso, 2016-08-09 Autonomous AI systems need complex computational techniques for planning and performing actions Planning and acting require significant deliberation because an intelligent system must coordinate and integrate these activities in order to act effectively in the real world This book presents a comprehensive paradigm of planning and acting using the most recent and advanced automated planning techniques It explains the computational deliberation capabilities that allow an actor whether physical or virtual to reason about its actions choose them organize them purposefully and act deliberately to achieve an objective Useful for students practitioners and researchers this book covers state of the art planning techniques acting techniques and their integration which will allow readers to design intelligent systems that are able to act effectively in the real world

Utilizing Problem Structure in Planning Jrg Hoffmann, 2003-10-10 Planning is a crucial skill for any autonomous agent be it a physically embedded agent such as a robot or a purely simulated software agent For this reason planning as a central research area of artificial intelligence from its beginnings has gained even more attention and importance recently After giving a general introduction to AI planning the book describes and carefully evaluates the algorithmic techniques used in fast forward planning systems FF demonstrating their excellent performance in many wellknown benchmark domains In advance an original and detailed investigation identifies the main patterns of structure which cause the performance of FF categorizing planning domains in a taxonomy of different classes with respect to their aptitude for being solved by heuristic

approaches such as FF As shown the majority of the planning benchmark domains lie in classes which are easy to solve
