Cretaceous Resources Events And Rhythms:

Orbital Forcing and Cyclic Sequences P. L. DeBoer, D. G. Smith, 2009-04-08 Classically orbital cycles have been recognized in pelagic and lacustrine sequences characterized by quiet sedimentation not disturbed by tectonics. However there is now increasing recognition that orbital cycles do influence climate and oceanography in general terms. There is also increasing acceptance of the possibility at least that the effect should be felt over large parts of the Earth's surface and that orbital cycles may well leave signs in other sedimentary environments that are commonly considered to be dominated by tectonics and eustasy. Containing thirty one papers from a symposium held at the International Sedimentological Congress in Nottingham in 1990 this volume spans a range of topics from the astronomical theory behind orbital forcing to field studies dealing with a broad range of sedimentary environments and to modelling and simulation. State of the art research papers. International expert authorship. The latest research in the highly topical subject of orbital forcing. *Sedimentology Review* 1 V. Paul Wright, 2009-04-03 *Sedimentology Review* is a new series of books edited by the Postgraduate Research Institute of Sedimentology PRIS and published by Blackwell Scientific Publications. The series provides the practicing sedimentologist with a means of rapidly accessing new developments in sedimentology. Existing textbooks date rapidly and new journals continuously become available making it difficult to remain current in all aspects of the subject. The series provides high quality reviews written in an accessible format on a wide variety of topics in sedimentology sedimentary geology. The series will be a major resource for students teachers and researchers as well as to geologists. Rapid coverage of the most recent developments in sedimentology for students researchers and professional geologists in industry. Edited by a board of experts in their respective fields. High quality accessible information from international authorities. Generously illustrated.

Interactions of C, N, P and S Biogeochemical Cycles and Global Change Roland Wollast, Fred T. Mackenzie, Lei Chou, 2013-06-29 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment volumes on the carbon C nitrogen N phosphorus P and sulfur S biogeochemical cycles and their interactions. Likens 1981 Bolin and Cook 1983. Substantial progress in the knowledge of these cycles has been made since publication of those volumes. In particular the nature and extent of biological and inorganic interactions between these cycles have been identified. Positive and negative feedbacks recognized and the relationship between the cycles and global environmental change preliminarily elucidated. In March 1991 a NATO Advanced Research Workshop was held for one week in Melreux Belgium to reexamine the biogeochemical cycles of C N P and S on a variety of time and space scales from a holistic point of view. This book is the result of that workshop. The biogeochemical cycles of C N P and S are intimately tied to each other through biological productivity and subsequently to problems of global environmental change. These problems may be the most challenging facing humanity in the 21st century. In the broadest sense global change encompasses both changes to the status of the large globally connected atmospheric oceanic and terrestrial environments e.g. tropospheric temperature increase and

change occurring as the result of nearly simultaneous local changes in many regions of the world e.g. eutrophication

Climate and Geo-Sciences A.L. Berger, S. Schneider, J.-C. Duplessy, 2012-12-06 It has been widely recognized recently that in order to make scientific progress on large and important problems e.g. carbon dioxide effects on climate viability of various sites for nuclear waste disposal etc. it is necessary to integrate knowledge from wide ranging sets of disciplines. This is certainly true in the climate sciences for progress in understanding the cause of the ice ages or the effects of industrial pollution on the future climate or even the likelihood of severe climatic consequences in the aftermath of nuclear war. All require state of the art input from many geoscience disciplines: climatology, oceanography, meteorology, chemistry, ecology, glaciology, geology, astronomy, space technology, computer technology, mathematics etc. Major international meetings have called for interaction of such geo-science disciplines to solve real world problems. To move beyond the rhetorical level, the NATO Special Programme on Global Transport Mechanisms in the Geo Sciences, whose activities started in 1983, decided to organise its closing symposium on such a topic which focuses on the relationship between climate and geo sciences. This symposium was held at the end of May 1988 at the Université Catholique de Louvain, Louvain-la-Neuve, Belgium. One hundred and thirty participants from the 16 NATO countries and a number of non NATO countries assembled for the Symposium. Another feature was the attendance by special invitation of 16 promising young scientists who might well become leading scientists on climate and geo sciences in their respective countries in the next century.

Cretaceous Resources, Events and Rhythms Robert N. Ginsburg, B. Beaudoin, 1990-02-28 This volume represents perhaps the best available report on state of the science of Cretaceous research. Some may query the wisdom of grand schemes such as the GSGP believing that science is best left to the imaginative individual. This useful volume offers a persuasive counter argument. That it speaks with many voices, if not languages, is to be expected and indeed adds to its strength. Cretaceous Research 11, 1990

Quaternary Deserts and Climatic Change A.S. Alsharhan, K.W. Glennie, G.L. Whittle, 2020-08-26 These proceedings record the results of climate change in many areas which are hyper arid deserts today but which almost cyclically at intervals of thousands or even hundreds of thousands of years have had a much more humid climate.
