Moran, 2024-04-30 Artificial Intelligence or AI has seemingly burst into public consciousness with sudden vigor Previously relinquished to computer science journals it erupted as the unrelenting topic of public media with most of the furor surrounding chatbots like ChatGPT Although many educators began worrying about the implications of AI in student learning and creative activity this book will demonstrate that AI can be harnessed as a source of inspiration and meaningful instruction With an emphasis on useful classroom strategies as well as a consideration of the ethics of AI this book seeks to start a conversation in this nascent area of research and practice The primary focus is on the use of AI in the secondary English classroom but educators in other disciplines will find plenty of ideas and information **Resources in Education** , 1986 *Integrating Computational Thinking Through Design-Based Learning* Mustafa Saritepeci, Hatice Yildiz Durak, 2025-01-02 This book creates a theoretical framework to consider the integration of computational thinking CT into learning and teaching processes in different contexts from a design based learning DBL perspective and presents various intervention studies The chapters each focus on a different aspect of CT integration through DBL providing an overview and discussing the benefits of integrating CT into the curriculum The book also discusses the design thinking process and how it can be used to promote CT focusing on CT concepts and considering perspectives on how these concepts can be integrated into DBL activities It also explores how artificial intelligence AI based design oriented learning activities can be used to develop students CT skills examines the information technology IT concept of pattern recognition and provides examples of how this can be integrated into DBL activities It presents practical examples

on integrating CT into the teaching learning process from a design based learning perspective summarizes approaches to assessing CT skills and discusses them in the context of design based learning Lastly this book also conducts a bibliometric analysis of publication and citation trends in computational thinking research conducted in design based learning

**Cross-Modal Learning: Adaptivity, Prediction and Interaction** Jianwei Zhang, Stefan Wermter, Fuchun

Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
