**Cross-Modal Learning: Adaptivity, Prediction and Interaction** Jianwei Zhang, Stefan Wermter, Fuchun  
Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is  
to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of  
cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal  
learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs  
within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal  
learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as  
learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its  
referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must  
be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human  
capabilities such as those involved in social cognition require learning from the richest combinations of cross modal  
information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this

direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
