Conservation Of Exploited Species:

Conservation of Exploited Species John D. Reynolds, 2001-10-18 The use of wildlife for food and other human needs poses one of the greatest threats to the conservation of biodiversity Wildlife exploitation is also critically important to many people from a variety of cultures for subsistence and commerce This book brings together international experts to examine interactions between the biology of wildlife and the divergent goals of people involved in hunting fishing gathering and culling wildlife Reviews of theory show how sustainable exploitation is tied to the study of population dynamics with direct links to reproductive rates life histories behaviour and ecology As such theory is rarely put into practice to achieve sustainable use and effective conservation Conservation of Exploited Species explores the many reasons for this failure and considers remedies to tackle them including scientific issues such as how to incorporate uncertainty into estimations as well as social and political problems that stem from conflicting goals in exploitation

Conservation and Sustainable Use E. J. Milner-Gulland, J. Marcus Rowcliffe, 2007-11-15 The relentless exploitation and unsustainable use of wildlife whether for food medicine or other uses is a key concern for conservationists worldwide Indeed wildlife conservation and sustainable use have recently become centrepieces in conservation and development research Assessment interpretation and ultimate action in a scientific study of exploited species must consider numerous factors from the biology habitat requirements and population dynamics of the species in question to the relationships that people have with their environment and the species within it Any long term management plan must ensure that people and wildlife can coexist otherwise it is doomed to failure Conservation and Sustainable Use provides a practical and integrated approach to carrying out research on the conservation of exploited species It is relevant to both tropical and temperate biomes and is applicable to all exploited species including mammals fish and plants It describes both the practical field and theoretical modelling techniques for obtaining and interpreting information integrating biological social economic and institutional analyses It also demonstrates how to translate information into effective action through appropriate interventions from legislation to changing people's attitudes This is the first time that all these issues have been covered together in a single practically orientated volume This book will be essential reading for graduate level students and researchers in conservation biology human ecology sociology and resource economics It will also provide an important reference for anyone who is interested in carrying out a scientifically based conservation programme for an exploited species including field biologists wildlife managers and practitioners in the fields of conservation and international development

The Exploitation of Mammal Populations V.J. Taylor, N. Dunstone, 2012-12-06 Human exploitation of other mammals has passed through three historical phases distinct in their ecological significance though overlapping in time Initially Homo sapiens was a predator particularly of herbivores but also of fur bearing predators From about 11 000 years ago goats and sheep were domesticated in the Middle East rapidly replacing gazelles and other game as the principal source of meat The principal crops including wheat and barley were taken into agriculture at about the

same time and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years In a few places such as Mexico Peru and China this Middle Eastern culture met and merged with agricultural traditions that had made a similar but independent transition These agricultural traditions provided the essential support for the industrial revolution and for a third phase of industrial exploitation of mammals In this chapter these themes are drawn out and their ecological significance is investigated Some of the impacts of humans on other mammals require consideration on a world wide basis but the chapter concentrates parochially on Great Britain What have been the ecological consequences of our exploitation of other mammals

Our nearest relatives chimpanzees orang utans and gorillas are essentially forest species deriving most of their diet from the fruits of forest trees and the shoots and leaves of plants

Handbook of Fish Biology and Fisheries Paul J. B. Hart, John D. Reynolds, 2008-04-15

Recent decades have witnessed strong declines in fish stocks around the globe amid growing concerns about the impact of fisheries on marine and freshwater biodiversity Fisheries biologists and managers are therefore increasingly asking about aspects of ecology behaviour evolution and biodiversity that were traditionally studied by people working in very separate fields This has highlighted the need to work more closely together in order to help ensure future success both in management and conservation The Handbook of Fish Biology and Fisheries has been written by an international team of scientists and practitioners to provide an overview of the biology of freshwater and marine fish species together with the science that supports fisheries management and conservation This volume subtitled Fisheries focuses on a wide range of topics including the history of fisheries science methods of capture marketing economics major models used in stock assessments and forecasting ecosystem impacts marine protected areas and conservation It builds on material in Volume 1 Fish Biology which ranges from phylogenetics and biogeography to physiology recruitment life histories genetics foraging reproductive behaviour and community ecology Together these books present the state of the art in our understanding of fish biology and fisheries and will serve as valuable references for undergraduates and graduates looking for a comprehensive source on a wide variety of topics in fisheries science They will also be useful to researchers who need up to date reviews of topics that impinge on their fields and decision makers who need to appreciate the scientific background for management and conservation of aquatic ecosystems To order volume II go to the box in the top right hand corner Alternatively to order volume I go to <http://www.blackwellpublishing.com/book.asp/ref/0632054123> or to order the 2 volume set go to <http://www.blackwellpublishing.com/book.asp/ref/0632064838> Provides a unique overview of the study of fish biology and ecology and the assessment and management of fish populations and ecosystems The first volume concentrates on aspects of fish biology and ecology both at the individual and population levels whilst the second volume addresses the assessment and management of fish populations and ecosystems Written by an international team of expert scientists and practitioners An invaluable reference tool for both students researchers and practitioners working in the fields of fish biology

and fisheries Workshop on Rebuilding Abalone Stocks in British Columbia Alan Campbell,2000 An international Workshop on Rebuilding Abalone Stocks in British Columbia was held during February 23 26 1999 in Nanaimo British Columbia Canada The main goal of the workshop was to develop a realistic strategy to rehabilitate depleted northern pinto abalone *Haliotis kamtschatkana* stocks in British Columbia The workshop was also meant to clarify the roles expectations and shared interests of many of the interest groups in British Columbia emphasizing the key role in the rebuilding plan of local communities including First Nations and non native communities Reptile Biodiversity Roy W.
