Conservation of Biological Resources E. J. Milner-Gulland, Ruth Mace, 2009-07-15 This book presents the issues surrounding the conservation of wildspecies and ecosystems used by people It is aimed at final year undergraduate and master s students taking courses in conservation environmental management ecological economics and related subjects as well as conservation professionals including managers policy makers and researchers The structure of the book is ideal for a course in conservation comprising a theoretical section written by the authors and a set of ten contributed case studies intentionally diverse in discipline geographical region and system of study The theoretical section provides the knowledge that is needed to understand the issues while the case studies can form the basis of seminars Readers will emerge with a clear recognition of the difficulties of limiting the harvesting of biological resources to sustainable levels and of the boundaries of sustainable use as a conservation tool The authors an ecologist and an anthropologist have both worked on the conservation and sustainable use of wildlife for several years including the ivory and rhino horn trades The first book to examine the issues underlying the sustainable use debate in a fully interdisciplinary manner Both the theoretical section and the case studies approach the issues using methods from economics ecology anthropology and other fields Designed as a course textbook combining a theoretical section with invited case studies written by expert practitioners in the field Outlines the new direction that conservation biology and thus conservation biologists must take if it is to be successful

Environmental Law of the British Branch of the International Law Association following an earlier study on the subject of International Law and Global Climate Change Graham Trotman 1991 It is the first major study of the Convention of the context in which it was negotiated and of the prospects for its implementation following the entry into force of the Convention on 29 December 1993

Global Action for Biodiversity Timothy Swanson,2013-11-19 At the Rio Earth Summit in 1992 the nations of the world adopted the convention on Biological Diversity Since then over 160 countries have ratified the Convention three Conferences of the Parties have taken place and a permanent secretariat has been established Despite this there remains a lot of uncertainty and even more controversy about what the Convention was intended to accomplish and how it was to do so This book published in association with the IUCN The World Conservation Union sets out to answer some of these questions by

recounting the history of the movements leading up to the Convention but especially by analysing the forces giving rise to the problem. It provides a specific set of policy prescriptions intended to facilitate the development of institutions and obligations within the international community which will give real effect to the aspirations of the Convention and ensure that it has some real effect at ground level. The author begins with an overview of the issues and then develops the basic nature of the problems within a bio-economic framework. He highlights the gaps in the Convention which remain to be filled, offers detailed explanations of the concepts involved and describes the nature of the solutions required. Thus he sets out a detailed plan for global action in support of an effective international convention for the conservation of biological diversity. The book is an excellent introduction to a very topical debate and a valuable reference point for conservationists, policy makers and students of development studies, environmental studies, environmental policy and conservation biology.

Conserving Biodiversity National Research Council, Board on Science and Technology for International Development, 1992-02-01. The loss of the earth's biological diversity is widely recognized as a critical environmental problem. That loss is most severe in developing countries where the conditions of human existence are most difficult. *Conserving Biodiversity* presents an agenda for research that can provide information to formulate policy and design conservation programs in the Third World. The book includes discussions of research needs in the biological sciences as well as economics and anthropology areas of critical importance to conservation and sustainable development. Although specifically directed toward development agencies, non-governmental organizations and decisionmakers in developing nations, this volume should be of interest to all who are involved in the conservation of biological diversity.

Biodiversity and Conservation Jeyabalan Sangeetha, Devarajan Thangadurai, Goh Hong Ching, Saher Islam, 2019-04-30. This volume provides an enlightening and pragmatic approach to preserving biological diversity by gathering a wide range of peer-reviewed scientific content from biodiversity researchers and conservators from around the world. It brings comprehensive knowledge and information on the present status of conservation of biological diversity including floral, faunal and microbial diversity. A detailed account of recent trends in conservation and applications under changing climate conditions focusing mainly on agriculturally and industrially important microbes and their sustainable utilization is presented as well. Over the past five decades, extensive research work has been done on many aspects of biodiversity conservation and sustainable utilization of biological resources. This book examines this crucial issue. Chapters discuss biodiversity concepts, benefits and values for economic and sustainable development, explores applications and strategies for biodiversity preservation and considers the role of biodiversity conservation in public awareness services and cultural significance. The volume also examines the process of evolution and the future of biodiversity in conjunction with climate change factors with special reference to infectious diseases.
