**Saving Species on Private Lands** Lowell E. Baier, 2020-03-09 Winner Independent Press Award Conservation Green 2021 The only hope for successful conservation of America's threatened endangered and at risk wildlife is through voluntary cooperative partnerships that focus on private land where over 75% of at risk species can be found Private landowners form the bedrock of these partnerships and they have a long history of rising to meet the challenge of conservation But they can't do it alone This book is a guide for private landowners who want to conserve wildlife Whether engaged in farming ranching forestry mining energy development or another business private working lands all have value as wildlife habitat with the proper management and financial support This book provides landowners and their partners with a roadmap to achieve conservation compatible with their financial and personal goals This book introduces the art and language of land management planning as well as regulatory compliance with laws such as the Endangered Species Act of 1973 It categorizes and explains the tools used by wildlife professionals to implement conservation on private lands Moreover it documents the multitude of federal state local and private opportunities for landowners to find financial and technical assistance in managing wildlife from working with a local NGO to accessing the 6 billion per year available through the federal Farm Bill

Mahoney, Valerius Geist, 2019-09-10 The foremost experts on the North American Model of Wildlife Conservation come together to discuss its role in the rescue recovery and future of our wildlife resources At the end of the nineteenth century North America suffered a catastrophic loss of wildlife driven by unbridled resource extraction market hunting and unrelenting subsistence killing This crisis led powerful political forces in the United States and Canada to collaborate in the hopes of reversing the process not merely halting the extinctions but returning wildlife to abundance While there was great understanding of how to manage wildlife in Europe where wildlife management was an old mature profession Continental methods depended on social values often unacceptable to North Americans Even Canada a loyal colony of England abandoned wildlife management as practiced in the mother country and joined forces with like minded Americans to develop a revolutionary system of wildlife conservation In time and surviving the close scrutiny and hard ongoing debate of open democratic societies this series of conservation practices became known as the North American Model of Wildlife Conservation In this book editors Shane P Mahoney and Valerius Geist both leading authorities on the North American Model bring together their expert colleagues to provide a comprehensive overview of the origins

achievements and shortcomings of this highly successful conservation approach This volume reviews the emergence of conservation in late nineteenth early twentieth century North America provides detailed explorations of the Model s institutions principles laws and policies places the Model within ecological cultural and socioeconomic contexts describes the many economic social and cultural benefits of wildlife restoration and management addresses the Model s challenges and limitations while pointing to emerging opportunities for increasing inclusivity and optimizing implementation Studying the North American experience offers insight into how institutionalizing policies and laws while incentivizing citizen engagement can result in a resilient framework for conservation Written for wildlife professionals researchers and students this book explores the factors that helped fashion an enduring conservation system one that has not only rescued recovered and sustainably utilized wildlife for over a century but that has also advanced a significant economic driver and a greater scientific understanding of wildlife ecology Contributors Leonard A Brennan Rosie Cooney James L Cummins Kathryn Frens Valerius Geist James R Heffelfinger David G Hewitt Paul R Krausman Shane P Mahoney John F Organ James Peek William Porter John Sandlos James A Schaefer **Wildlife Habitat Conservation** Michael L. Congress. House. Select Committee on Conservation of Wildlife Resources, 1935 **International Wildlife Management** John L. Koprowski, Paul R. Krausman, 2019-09-10 A call for wildlife conservationists to transcend the boundaries of locality share best practices and unite with a common voice to influence global policy Habitat loss disease management predator human conflict illegal trade these are among the many conservation challenges faced by wildlife experts around the world But how wildlife professionals approach these issues has historically been geographically fragmented By providing a broad perspective on issues faced by wildlife on an international scale the authors of International Wildlife Management make vital connections drawing attention to underlying causes and strategies for mitigation that may look surprisingly similar from Montana to Zimbabwe Bringing together wildlife professionals from around the globe to discuss shared challenges International Wildlife Management examines widespread patterns of wildlife loss covers key conservation strategies including species reintroduction community

**Land Rights, Biodiversity Conservation and Justice** Sharlene Mollett, Thembela Kepe, 2018-04-17 In the context of sustainable development recent land debates tend to construct two porous camps On the one side norms of land justice and their advocates dictate that people's rights to tenure security are tantamount and even sometimes key to successful conservation practice On the other hand biodiversity protection and conservation advocates supported by global environmental organizations and states remain committed to conservation strategies steeped in genetics and biological sciences working on behalf of a global mandate for biodiversity and climate change mitigation Land Rights Biodiversity Conservation and Justice seeks to illuminate struggles for land and territory in the context of biodiversity conservation This edited volume explores the particular ideologies narratives and practices that are mobilized when the agendas of biodiversity conservation practice meet clash and blend with the demands for land and access and control of resources from people living in and in close proximity to parks The book maintains that while biodiversity conservation is an important goal in a time where climate change is a real threat to human existence the successful and just future of biodiversity conservation is contingent upon land tenure security for local people The original research gathered together in this volume will be of considerable interest to researchers of development studies political ecology land rights and conservation
