- Human beings aren't born with specific set of communicative behaviors (unlike animals)
- Generative grammar is not as complexly confusing, and language acquisition can be explained by being integrated with other cognitive and social-cognitive skills.
- \*Intention-reading: share attention with others and follow it, imitatively
- Pattern-finding: form perceptual and conceptual categories and analogies
- Usage-based linguistics: language structure emerges from language use! Includes the core grammar as well as idiosyncratic and things in between.
- Grammaticalization: linguistic constructions are themselves meaningful linguistic symbols, NOT algebraic procedures

*Aphasiology - A Usage-Based Approach to Language in Aphasia* Rachel Hatchard, 2021-10-15 Aphasia is the most common acquired language disorder in adults resulting from brain damage usually stroke This book firstly explains how aphasia research and clinical practice remain heavily influenced by rule based generative theory and summarizes key shortcomings with this approach Crucially it demonstrates how an alternative the constructivist usage based approach can provide a more plausible theoretical perspective for characterizing language in aphasia After detailing rigorous transcription and segmentation methods it presents constructivist usage based analyses of spontaneous speech from people with various aphasia types challenging a clear cut distinction between lexis and grammar emphasizing the need to consider whole form storage and frequency effects beyond single words and indicating that individuals fall along a continuum of spoken language capability rather than differing categorically by aphasia type It provides original insight into aphasia with wide reaching implications for clinical practice while equally highlighting how the study of aphasia is important for the development of Cognitive Linguistics

**Linguistic Knowledge and Language Use** Benoît Leclercq, 2023-11-02 One of the key challenges in linguistics is to account for the link between linguistic knowledge and our use of language in a way that is both descriptively accurate and cognitively plausible This pioneering book addresses these challenges by combining insights from Construction Grammar and Relevance Theory two influential approaches which until now have been considered incompatible After a clear and detailed presentation of both theories the author demonstrates that their integration is possible and explains why this integration is necessary in order to understand exactly how meaning comes about A new theoretical model is offered that provides ground breaking insights into the semantics pragmatic interface and addresses a variety of topics including the nature of lexical and grammatical concepts procedural meaning coercion and idiom processing This title is part of the Flip it Open Programme and may also be available Open Access Check our website Cambridge Core for details

**Grammaticalization meets Construction Grammar** Evie Coussé, Peter Andersson, Joel Olofsson, 2018-05-23 Grammaticalization research has increasingly highlighted the notion of constructions in the last decade In the wake of this heightened interest efforts have been made in grammaticalization research to more precisely articulate the largely pretheoretical notion of construction in the theoretical framework of construction grammar As such grammaticalization research increasingly interacts and converges with the emerging field of diachronic construction grammar This volume brings together articles that are situated at the intersection of grammaticalization research and diachronic construction grammar All articles share an interest in integrating insights from grammaticalization research and construction grammar in order to advance our understanding of empirical cases of grammaticalization Constructions at various levels of abstractness are investigated both in well documented languages such as Ancient Greek Latin Spanish German Norwegian and English and in less described languages such as Manchu and Mongolian
