Constructing Measures An Item Response Modeling Approach:

Constructing Measures Mark Wilson, 2023-06-05 *Constructing Measures* introduces a way to understand the advantages and disadvantages of measurement instruments. It explains the ways to use such instruments and how to apply these methods to develop new instruments or adapt old ones based on item response modeling and construct references. Now in its second edition, this book focuses on the steps taken while constructing an instrument and breaks down the building blocks that make up an instrument: the construct map, the design plan for the items, the outcome space, and the statistical measurement model. The material covers a variety of item formats including multiple choice, open ended, and performance items, projects, portfolios, Likert and Guttman items, behavioral observations, and interview protocols. Each chapter includes an overview of the key concepts, related resources for further investigation, and exercises and activities. A variety of examples from the behavioral and social sciences and education, including achievement and performance testing, attitude measures, health measures, and general sociological scales, demonstrate the application of the material. New to this edition are additional example contexts including a cognitive achievement example, an attitude example, and a behavioral example, and new concentrations on specific measurement issues and practices such as standard setting, computer delivery, and reporting, and going beyond the Likert response format. *Constructing Measures* is an invaluable text for undergraduate and graduate courses on item test or instrument development, measurement, item response theory, or Rasch analysis, taught in a variety of departments including education, statistics, and psychology. The book also appeals to practitioners who develop instruments, including industrial, organizational, educational, and school psychologists, health outcomes researchers, program evaluators, and sociological measurers.

Pacific Rim Objective Measurement Symposium (PROMS) 2012 Conference

Proceeding Quan Zhang, Hong Yang, 2013-06-13 Entrusted by the Board of Management of the Pacific Rim Objective Measurement Symposium, PROMS 2012 is held in Jiaying, China, from August 6-9, 2012. Over the past years, PROMS has been hosted in many parts of the Pacific Rim, in Singapore, Malaysia, Hong Kong, Taiwan, and Tokyo, which has greatly promoted the research of and contributed to the development of the Rasch Model in one way or another. As early as in the 1980s, the ideas and concepts regarding IRT were first introduced into China by Prof. Gui Shichun, my Ph.D. supervisor, and it is Prof. Gui who first conducted with great success the ten-year-long 1990-1999 Equating Project for Matriculation English Test (MET) in China. MET is the most influential entrance examination for higher education administered annually to over 3.3 million candidates. Then, the Equating Project won recognition by Charles Alderson and other foreign counterparts during the 1990s. Academically, those were good old days for Chinese testing experts and psychometricians. Then, for certain reasons, the equating practice abruptly discontinued. Therefore, in China nowadays, the application of IRT-based software like BILOG, Parscale, Iteman 4, and others to real testing problem solving is confined to an extremely small band of people. In this sense, PROMS 2012 meets an important need in that it provides an excellent introduction of IRT and its application. And anyone who

is seriously interested in research and development in the field of psychometrics or language testing will find such a symposium and related workshops to be an excellent source of information about the application of Rasch Model

PROMS2012 focuses on recent advances in objective measurement and provides an international forum on both the latest research in using Rasch measurement and non Rasch practice

Oxford Handbook of Methods in Positive Psychology Anthony D. Ong, Manfred H. M. Van Dulmen, 2007 In the short

time since the publication of the Handbook of Positive Psychology research results on the psychology of human strengths have proliferated. However, no major volume has documented the methods and theory used to achieve these results. Oxford Handbook of Methods in Positive Psychology fills this need, providing a broad overview of diverse contemporary methods in positive psychology. With contributions from both leading scholars and promising young investigators, the handbook serves to illuminate and at times challenge traditional approaches. Incorporating multiple levels of analysis from biology to culture, the contributors present state-of-the-art techniques including those for estimating variability and change at the level of the individual, identifying reliability of measurements within and across individuals, and separating individual differences in growth from aspects of phenomena that exhibit shorter-term variability over time. The volume covers such topics as wisdom, health, hope, resilience, religion, relationships, emotions, well-being, character strengths, and laughter. It enhances our understanding of the balance between human deficits and strengths and demonstrates their connections to other problems. Oxford Handbook of Methods in Positive Psychology will be the essential reference for methods in positive psychology.
