## **Construction Grammar In A Crosslanguage Perspective Constructional Approaches To Language S:**

**Construction Grammar in a Cross-Language Perspective** Mirjam Fried, Jan-Ola Östman, 2004-12-23 This volume gives an easily accessible yet comprehensive sophisticated and example rich introduction to Construction Grammar as it has been developed from the early 1980 s by Charles J Fillmore and his associates It also provides a succinct account of the historical and intellectual background of the model and shows how Construction Grammar can easily be applied to typologically very different languages and to a variety of language specific phenomena All of the contributors to the volume came out of the Fillmorean school at UC Berkeley and have worked consistently on applying and further developing the model in various domains of linguistic analysis The Thumbnail sketch by Fried stman is the only extensive introduction published so far to Fillmorean Construction Grammar

**Romance Perspectives on Construction Grammar** Hans C. Boas, Francisco González-García, 2014-08-15 The chapters in this book show how the different flavors of Construction Grammar provide illuminating insights into the syntax semantics pragmatics and discourse functional properties of specific phenomena in Romance languages such as Castilian Spanish French Romanian and Latin from a synchronic as well as a diachronic viewpoint The phenomena surveyed include the role of constructional meanings in novel verb noun compounds in Spanish the relevance of lexicalization for a constructionist analysis of complex prepositions in French the complementariness of fragments patterns and constructions as theoretical and explanatory constructs in verb complementation in French Latin and Spanish non constituent coordination phenomena e g Right Node Raising Argument Cluster Coordination and Gapping in Romanian and variable type framing in Spanish constructions of directed motion in the light of Leonard Talmy s 2000 typological differences of lexicalization between satellite framed and verb framed languages

**Contrastive Studies in Construction Grammar** Hans Christian Boas, 2010 The papers in this volume provide a contrastive application of Construction Grammar By referencing a well described constructional phenomenon in English each paper provides a solid foundation for describing and analyzing its constructional counterpart in another language This approach shows that the semantic description including discourse pragmatic and functional factors of an English construction can be regarded as a first step towards a tertium comparationis that can be employed for comparing and contrasting the formal properties of constructional counterparts in other languages Thus the meaning pole of constructions should be regarded as the primary basis for comparisons of constructions across languages the form pole is only secondary This volume shows that constructions are viable descriptive and analytical tools for cross linguistic comparisons that make it possible to capture both language specific idiosyncratic properties as well as cross linguistic generalizations

**Corpus-based Approaches to Construction Grammar** Jiyoung Yoon, Stefan Th. Gries, 2016-09-08 This volume brings together empirical Construction Grammar studies to i promote cross fertilization between researchers interested in constructional approaches on various languages and ii further the growing trend towards empirically rigorous research that takes seriously a commitment not only

to usage based theories but also to usage based methodologies Accordingly the chapters in this volume comprise a range of studies not based on synchronic contemporary English but include Dutch old English Italian and Spanish This volume also features studies from a wider range of statistical sophistication some chapters use more traditional frequency and attestation based approaches some chapters use inferential statistical techniques to explore lexically specific preferences and patterns in constructional slots and some chapters use multifactorial hypothesis testing techniques or multivariate exploratory tools to discover patterns in corpus data that a mere eye balling or simple statistical tools would not uncover

*Grammaticalization meets Construction Grammar* Evie Coussé, Peter Andersson, Joel Olofsson, 2018-05-23 Grammaticalization research has increasingly highlighted the notion of constructions in the last decade In the wake of this heightened interest efforts have been made in grammaticalization research to more precisely articulate the largely pretheoretical notion of construction in the theoretical framework of construction grammar As such grammaticalization research increasingly interacts and converges with the emerging field of diachronic construction grammar This volume brings together articles that are situated at the intersection of grammaticalization research and diachronic construction grammar All articles share an interest in integrating insights from grammaticalization research and construction grammar in order to advance our understanding of empirical cases of grammaticalization Constructions at various levels of abstractness are investigated both in well documented languages such as Ancient Greek Latin Spanish German Norwegian and English and in less described languages such as Manchu and Mongolian

**Contexts and Constructions** Alexander Bergs, Gabriele Diwald, 2009 Printbegr

nsninger Der kan printes 10 sider ad gangen og max 40 sider pr session

**Diachronic Construction Grammar** Jóhanna Barðdal, Elena Smirnova, Lotte Sommerer, Spike Gildea, 2015-07-15 Construction Grammar as a framework offers a new perspective on traditional historical questions in diachronic linguistics and language change how do new constructions arise how should competition in diachronic variation be accounted for how do constructions fall into disuse and how do constructions change in general formally and or semantically and with what implications for the language system as a whole This volume offers a broad introduction to the confluence of Construction Grammar and historical syntax and also detailed case studies of various instances of syntactic change modeled within Construction Grammar The volume demonstrates that Construction Grammar as a theory is particularly well suited for modeling historical changes in morphosyntax and it also documents challenging new phenomena that require a theoretical account within any competing framework of syntactic change

[The Cambridge Handbook of Construction Grammar](#) Mirjam Fried, Kiki Nikiforidou, 2025-02-06 Construction Grammar is one of the fastest growing branches of functional syntax Bringing together an international team of scholars this handbook provides a complete overview of the current issues and applications in this approach Divided into six thematic parts it covers the fundamental notions of Construction Grammar its conceptual origins and the basic ideas that unite its various branches its solid empirical grounding and affinities with corpus linguistics and the diverse perspectives in

constructional scholarship It highlights advances in discourse related topics and applications to various domains including multimodal communication language learning and teaching and computational linguistics and each chapter contains numerous illustrative examples and case studies involving a variety of languages It also includes in depth empirically grounded analyses of diverse theoretical methodological and interdisciplinary issues alongside step by step introductions to the theory making it essential reading for both researchers and students working in functional and cognitive approaches to linguistic analysis and syntactic theory *Give Constructions Across Languages* Myriam Bouveret, 2021 This book deeply anchored into the Cognitive Construction Grammar theoretical movement proposes analyses of constructional phenomena which illustrate a grammar to lexicon continuum **Construction Grammars** Jan-Ola Östman, Mirjam Fried, 2005-01-01 Addressing a number of issues such as coercion discourse patterning language change the contributions show how CxG must be part and parcel of cognitively oriented studies of language including language universals Jacket *Argument Structure in Usage-based Construction Grammar* Florent Perek, 2015 This book investigates argument structure in English from a usage based perspective taking the view that the cognitive representation of grammar is shaped by language use and that crucial aspects of grammatical organization are tied to the frequency with which words and syntactic constructions are used

**Constructicography** Benjamin Lyngfelt, Lars Borin, Kyoko Ohara, Tiago Timponi Torrent, 2018-07-17 In constructionist theory a constructicon is an inventory of constructions making up the full set of linguistic units in a language In applied practice it is a set of construction descriptions a dictionary of constructions The development of constructicons in the latter sense typically means combining principles of both construction grammar and lexicography and is probably best characterized as a blend between the two traditions We call this blend constructicography The present volume is a comprehensive introduction to the emerging field of constructicography After a general introduction follow six chapters presenting constructicon projects for English German Japanese Brazilian Portuguese Russian and Swedish respectively often in relation to a framenet of the language In addition there is a chapter addressing the interplay between linguistics and language technology in constructicon development and a final chapter exploring the prospects for interlingual constructicography This is the first major publication devoted to constructicon development and it should be particularly relevant for those interested in construction grammar frame semantics lexicography the relation between grammar and lexicon or linguistically informed language technology **Constructional Reorganization** Jaakko Leino, 2008-02-06 The present volume consists of several novel and different applications of the Construction Grammar framework to areas such as language change variation and the internal organization of grammar The book is a collection of articles which bring together the framework of Construction Grammar and the constantly changing language system Thereby two main questions are addressed which are of paramount interest to linguists working with the notion of grammatical construction Where do constructions come from And how are the grammatical constructions in a given language organized to form the coherent

whole which we refer to as grammar The book connects the latest developments in grammatical theory and Construction Grammar with empirical findings and data language specific research traditions and cross language issues It is aimed at linguists interested in Construction Grammar constructional approaches to grammar more generally language variation and change and the internal architecture of grammar      **Linking Constructions into Functional Linguistics** Brian

Nolan, Elke Diedrichsen, 2013-12-06 There is a growing awareness of the significance of constructions in grammar in the world's languages To date there has not been a single volume that addresses the issues of constructions within a functional Role and Reference Grammar RRG account The book is a collection of articles that will serve the scholarly community as a reference work on the role place and significance of constructions within this functional model of grammar As a result this volume represents the first instance of cross linguistic comparison of these important discourse and syntax related phenomena The articles cover a variety of typologically different languages including German Irish Spanish French Japanese Yaqui Tepehua Totonacan Persian and English and they offer new data on the role of constructions within the RRG theory in these languages Further this volume contributes towards providing a comprehensive overview of grammatical constructions which are central to our understanding of how human languages function in a functional linguistics perspective This scholarly work is grounded in a functionally oriented model that makes strong claims of descriptive and typological adequacy The book will represent a valuable step forward in linguistics research as it applies the RRG theoretical framework to the analyses of constructions      *Constructionalization and Constructional Changes* Elizabeth Closs Traugott, Graeme

Trousdale, 2013-11 This book develops an approach to language change based on construction grammar in order to reconceptualize grammaticalization and lexicalization The authors show that language change proceeds by micro steps involving every aspect of grammar including pragmatics and discourse functions A new and productive approach to historical linguistics      **Modality and Diachronic Construction Grammar** Martin Hilpert, Bert Cappelle, Ilse Depraetere, 2021-10-15

This volume explores how Diachronic Construction Grammar can shed new light on changes in a central and well researched domain of grammar namely modality Its main goal is to show how constructional analyses can help us address some of the long standing questions that have informed discussions of modal expressions and their development and to illustrate the processes that are involved in these developments on the basis of data from languages such as English Finnish French Galician German and Japanese The studies in this volume are organized around three interrelated topics The first of these concerns the organization of modal constructions in a network A second focus area of the studies in this volume concerns the developmental pathways that modal constructions follow diachronically The third topic that ties the contributions of this volume together is the contrast between constructionalization and constructional change      Constructing Families of

Constructions Francisco José Ruiz de Mendoza Ibáñez, Alba Luzondo Oyón, Paula Pérez Sobrino, 2017-07-26 Within Construction Grammar this volume moves away from a compartmentalized view of constructions with the aim of providing a

more holistic description of grammar. Thus the book brings together analyses that look at constructional families within the construction of such languages as English, Spanish, German, Polish, Croatian, and Hungarian. Part 1 focuses on how different analytical perspectives may be applied to comparable and/or connected constructions with a view to enhancing our understanding of their similarities, differences, and relations. Part 2 contributes to the state of the art in Construction Grammar in three ways: i) by reconciling aspects of various constructionist analyses; ii) by determining to what extent competing constructionist perspectives can offer more adequate approaches to specific analytical needs; and iii) by challenging central assumptions within Construction Grammar. This book is expected to encourage further research into the anatomy of constructional families and their interrelations in all domains of constructional organization. **Constructions**

**in Contact 2** Hans Christian Boas, Steffen Höder, 2021. This volume builds on previous constructionist work in particular Diasystematic Construction Grammar (DCxG) and extends its methodology and insights in three major ways. **Construction Grammar** Thomas Hoffmann, 2022-07-28. What do speakers of a language have to know and what can they figure out on the basis of that knowledge in order for them to use their language successfully? This is the question at the heart of Construction Grammar: an approach to the study of language that views all dimensions of language as equal contributors to shaping linguistic expressions. The trademark characteristic of Construction Grammar is the insight that language is a repertoire of more or less complex patterns: constructions that integrate form and meaning. This textbook shows how a Construction Grammar approach can be used to analyse the English language, offering explanations for language acquisition, variation, and change. It covers all levels of syntactic description, from word formation and inflectional morphology to phrasal and clausal phenomena and information structure constructions. Each chapter includes exercises and further readings, making it an accessible introduction for undergraduate students of linguistics and English language. *Grammatical Constructions* Mirjam Fried, Hans C. Boas, 2005-12-14. This volume brings into focus the conceptual roots of the notion 'grammatical construction' as the theoretical entity that constitutes the backbone of Construction Grammar: a unique grammatical model in which grammatical constructions have the status of elementary building blocks of human language. By exploring the analytic potential and applicability of this notion, the contributions illustrate some of the fundamental concerns of constructional research. These include issues of sentence structure in a model that rejects the autonomy of syntax; the contribution of Frame Semantics in establishing the relationship between syntactic patterning and the lexical meaning of verbs; and the challenge of capturing the dynamic and variable nature of grammatical structure in a systematic way. All the authors share a commitment to studying grammar in its use, which gives the book a rich empirical dimension that draws on authentic data from typologically diverse languages.

## Reviewing **Construction Grammar In A Croblanguage Perspective Constructional Approaches To Language S:** Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is actually astonishing.
