Convergence and Summability of Fourier Transforms and Hardy Spaces Ferenc Weisz, 2017-12-27 This book investigates the convergence and summability of both one dimensional and multi dimensional Fourier transforms as well as the theory of Hardy spaces To do so it studies a general summability method known as theta summation which encompasses all the well known summability methods such as the Fej r Riesz Weierstrass Abel Picard Bessel and Rogosinski summations Following on the classic books by Bary 1964 and Zygmund 1968 this is the first book that considers strong summability introduced by current methodology A further unique aspect is that the Lebesgue points are also studied in the theory of multi dimensional summability In addition to classical results results from the past 20 30 years normally only found in scattered research papers are also gathered and discussed offering readers a convenient one stop source to support their work As such the book **Topics in Integral and Integro-Differential** will be useful for researchers graduate and postgraduate students alike Equations Harendra Singh, Hemen Dutta, Marcelo M. Cavalcanti, 2021-03-15 This book includes different topics associated with integral and integro differential equations and their relevance and significance in various scientific areas of study and research Integral and integro differential equations are capable of modelling many situations from science and engineering Readers should find several useful and advanced methods for solving various types of integral and integro differential equations in this book The book is useful for graduate students Ph D students researchers and educators interested in mathematical modelling applied mathematics applied sciences engineering etc Key Features New and advanced methods for solving integral and integro differential equations Contains comparison of various methods for accuracy Demonstrates the applicability of integral and integro differential equations in other scientific areas Examines qualitative as well as quantitative properties of solutions of various types of integral and integro differential equations **Modern Trends in** Constructive Function Theory E. Lorentz, Manfred von Golitschek, Yuly Makovoz, 1996-05-14 In the last 30 years Approximation Theory has undergone wonderful develop ment with many new theories appearing in this short interval This book has its origin in the wish to adequately describe this development in particular to rewrite the short 1966 book of G G Lorentz Approximation of Functions Soon after 1980 R A DeVore and Lorentz joined forces for this purpose The outcome has been their Constructive Approximation 1993 volume 303 of this series References to this book are given as for example rCA p 201 Later M v Golitschek and Y Makovoz joined Lorentz to produce the present book as a continuation of the first Completeness has not been our goal In some of the theories our exposition offers a selection of important representative theorems some other cases are treated more systematically As in the first book we treat only approximation of functions of one real variable Thus functions of several variables complex approximation or interpolation are not treated although complex variable methods appear often Conformal Invariants in Constructive Theory of Functions of Complex Variable Vladimir V.
