**Principles and Practice of Constraint Programming** Alan H. Borning,Alan Borning,1994-10-12 This volume is the proceedings of the Second International Workshop on the Principles and Practice of Constraint Programming held at Rosario Orcas Island Washington USA in May 1994 in cooperation with AAAI and ALP The volume contains 27 full revised papers selected from 87 submissions as well as a summary of a panel session on commercial applications of constraint programming The contributions cover a broad range of topics including constraint programming languages algorithms for constraint satisfaction and entailment and constraints and their relation to fields such as artificial intelligence databases operations research problem solving and user interfaces    Principles and Practice of Constraint Programming - CP '95 Ugo Montanari,1995-09-06 This book constitutes the proceedings of the First International Conference on Principles and Practice of Constraint Programming CP 95 held in Cassis near Marseille France in September 1995 The 33 refereed full papers included were selected out of 108 submissions and constitute the main part of the book in addition there is a 60 page documentation of the four invited papers and a section presenting industrial reports Thus besides having a very strong research component the volume will be attractive for practitioners The papers are organized in sections on efficient constraint handling constraint logic programming concurrent constraint programming computational logic applications and

operations research      Handbook of Constraint Programming Francesca Rossi,Peter van Beek,Toby Walsh,2006-08-18 Constraint programming is a powerful paradigm for solving combinatorial search problems that draws on a wide range of techniques from artificial intelligence computer science databases programming languages and operations research Constraint programming is currently applied with success to many domains such as scheduling planning vehicle routing configuration networks and bioinformatics The aim of this handbook is to capture the full breadth and depth of the constraint programming field and to be encyclopedic in its scope and coverage While there are several excellent books on constraint programming such books necessarily focus on the main notions and techniques and cannot cover also extensions applications and languages The handbook gives a reasonably complete coverage of all these lines of work based on constraint programming so that a reader can have a rather precise idea of the whole field and its potential Of course each line of work is dealt with in a survey like style where some details may be neglected in favor of coverage However the extensive bibliography of each chapter will help the interested readers to find suitable sources for the missing details Each chapter of the handbook is intended to be a self contained survey of a topic and is written by one or more authors who are leading researchers in the area The intended audience of the handbook is researchers graduate students higher year undergraduates and practitioners who wish to learn about the state of the art in constraint programming No prior knowledge about the field is necessary to be able to read the chapters and gather useful knowledge Researchers from other fields should find in this handbook an effective way to learn about constraint programming and to possibly use some of the constraint programming concepts and techniques in their work thus providing a means for a fruitful cross fertilization among different research areas The handbook is organized in two parts The first part covers the basic foundations of constraint programming including the history the notion of constraint propagation basic search methods global constraints tractability and computational complexity and important issues in modeling a problem as a constraint problem The second part covers constraint languages and solver several useful extensions to the basic framework such as interval constraints structured domains and distributed CSPs and successful application areas for constraint programming Covers the whole field of constraint programming Survey style chapters Five chapters on applications      New Trends in Constraints Krzysztof R. Apt,Antonis Kakas,Eric Monfroy,Francesca Rossi,2003-05-15 This book constitutes the thoroughly refereed post proceedings of the Joint ERCIM Compulog Net Workshop on New Trends in Constraints held in Paphos Cyprus Greece in October 1999 The 12 revised full research papers presented together with four surveys by leading researchers were carefully reviewed The book is divided in topical sections on constraint propagation and manipulation constraint programming and rule based constraint programming **Constraint Processing** Manfred Meyer,1995-06-20 This volume contains 15 thoroughly refereed full research papers selected from the presentations given during two workshops on constraint processing these workshops were held in conjunction with the International Congress on Computer Systems and Applied Mathematics St Petersburg Russia July 1993

and the European Conference on Artificial Intelligence Amsterdam The Netherlands August 1994 This volume essentially contributes to integrating the different approaches to the young and very active field of constraint processing by offering papers from logic programming knowledge representation expert systems theoretical computer science operations research and other fields Among contributions are two surveys by Podelski and van Roy and by Freuder *Trends in Constraint Programming* Frédéric Benhamou,Narendra Jussien,Barry A. O'Sullivan,2013-05-06 This title brings together the best papers on a range of topics raised at the annual International Conference on Principles and Practice of Constraint Programming This conference provides papers and workshops which produce new insights concepts and results which can then be used by those involved in this area to develop their own work Recent Advances in Constraints Krzysztof R. Apt,Francois Fages,Francesca Rossi,Peter Szeredi,Josef Váncza,2004-03-26 Constraint programming is the fruit of several decades of research carried out in mathematical logic automated deduction operations research and arti cial intelligence The tools and programming languages arising from this research eldhaveenjoyedrealsuccessintheindustrialworldastheycontributetosolving hard combinatorial problems in diverse domains such as production planning communication networks robotics and bioinformatics This volume contains the extended and reviewed versions of a selection of papers presented at the Joint ERCIM CoLogNET International Workshop on Constraint Solving and Constraint Logic Programming CSCLP2003 which was held from June 30 to July 2 2003 The venue chosen for the seventh edition of this annual workshop was the Computer and Automation Research Institute of the Hungarian Academy of Sciences MTA SZTAKI in Budapest Hungary This institute is one of the 20 members of the Working Group on Constraints of the European Research Consortium for Informatics and Mathematics ERCIM For many participants this workshop provided the rst opportunity to visit their ERCIM partner in Budapest CoLogNET is the European funded network of excellence dedicated to s porting and enhancing cooperation and research on all areas of computational logic and continues the work done previously by the Compulog Net In part ular the aim of the logic and constraint logic programming area of CoLogNET is to foster and support all research activities related to logic programming and constraint logic programming The editors would like to take the opportunity and thank all the authors who submitted papers to this volume as well as the reviewers for their helpful work **Principles and Practice of Constraint Programming** John Hooker,2018-08-22 This book constitutes the proceedings of the 24th International Conference on Principles and Practice of Constraint Programming CP 2018 held in Lille France in August 2018 The 41 full and 9 short papers presented in this volume were carefully reviewed and selected from 114 submissions They deal with all aspects of computing with constraints including theory algorithms environments languages models systems and applications such as decision making resource allocation scheduling configuration and planning The papers were organized according to the following topics tracks main technical track applications track CP and data science CP and music CP and operations research CP optimization and power system management multiagent and parallel CP and testing and verification
