Constraints Language And Computation:

Constraints, Language and Computation M. A. Rosner, C. J. Rupp, Torrence Johnson, 2014-06-28 Constraint based linguistics is intersected by three fields logic linguistics and computer sciences The central theme that ties these different disciplines together is the notion of a linguistic formalism or metalanguage This metalanguage has good mathematical properties is designed to express descriptions of language and has a semantics that can be implemented on a computer Constraints Language and Computation discusses the theory and practice of constraint based computational linguistics The book captures both the maturity of the field and some of its more interesting future prospects during a particularly important moment of development in this field

Constraints and Language Philippe Blache, Henning Christiansen, Verónica Dahl, 2014-10-16 The concept of constraint is widely used in linguistics computer science and psychology However its implementation varies widely depending on the research domain namely language description knowledge representation cognitive modelling and problem solving These various uses of constraints offer complementary views on intelligent mechanisms For example in depth descriptions implementing constraints are used in linguistics to filter out syntactic or discursive structures by means of dedicated description languages and constraint ranking In computer science the constraint programming paradigm views constraints as a whole which can be used for example to build specific structures Finally in psycholinguistics experiments are carried out to investigate the role of constraints within cognitive processes both in comprehension and production with various applications such as dialog modelling for people with disabilities In this context Constraints and Language builds an extended overview of the use of constraints to model and process language This book will be useful for researchers willing to get a grip on the various uses of constraints in natural language processing and also as a class book for academic staff who want to set up advanced courses around the concept of constraint based natural language processing
