Constructing Knowledge In The History Of Science Osiris:

Constructing Knowledge in the History of Science Arnold Thackray, 1995 Providing a review of current controversies emerging agendas and recent research in the history of science these essays are organized to consider such themes as knowledge and values gender or authorship knowledge constructed by discipline chronology or geography and knowledge in related fields

Creating Scientific Concepts Nancy J Nersessian, 2010-08-13 An account that analyzes the dynamic reasoning processes implicated in a fundamental problem of creativity in science how does genuine novelty emerge from existing representations How do novel scientific concepts arise In *Creating Scientific Concepts* Nancy Nersessian seeks to answer this central but virtually unasked question in the problem of conceptual change She argues that the popular image of novel concepts and profound insight bursting forth in a blinding flash of inspiration is mistaken Instead novel concepts are shown to arise out of the interplay of three factors an attempt to solve specific problems the use of conceptual analytical and material resources provided by the cognitive social cultural context of the problem and dynamic processes of reasoning that extend ordinary cognition Focusing on the third factor Nersessian draws on cognitive science research and historical accounts of scientific practices to show how scientific and ordinary cognition lie on a continuum and how problem solving practices in one illuminate practices in the other Her investigations of scientific practices show conceptual change as deriving from the use of analogies imagistic representations and thought experiments integrated with experimental investigations and mathematical analyses She presents a view of constructed models as hybrid objects serving as intermediaries between targets and analogical sources in bootstrapping processes Extending these results she argues that these complex cognitive operations and structures are not mere aids to discovery but that together they constitute a powerful form of reasoning model based reasoning that generates novelty This new approach to mental modeling and analogy together with Nersessian's cognitive historical approach make *Creating Scientific Concepts* equally valuable to cognitive science and philosophy of science

Designing for Science Kevin Crowley, Christian D. Schunn, Takeshi Okada, 2001-03 This vol is crafted around the design cycle as it relates to research on everyday classroom professional science Individual chs bk as a whole will appeal to educators cognitive scientists those who study the process of scientific thinking in practice

Thomas Kuhn Thomas Nickles, 2003 Publisher Description

Representing Electrons Theodore Arabatzis, 2006 Both a history and a metahistory *Representing Electrons* focuses on the development of various theoretical representations of electrons from the late 1890s to 1925 and the methodological problems associated with writing about unobservable scientific entities Using the electron or rather its representation as a historical actor Theodore Arabatzis illustrates the emergence and gradual consolidation of its representation in physics its career throughout old quantum theory and its appropriation and reinterpretation by chemists As Arabatzis develops this novel biographical approach he portrays scientific representations as partly autonomous agents with lives of their own Furthermore he argues that the considerable variance in the representation

of the electron does not undermine its stable identity or existence Raising philosophical issues of contentious debate in the history and philosophy of science namely scientific realism and meaning change Arabatzis addresses the history of the electron across disciplines integrating historical narrative with philosophical analysis in a book that will be a touchstone for historians and philosophers of science and scientists alike

Hyperdemocracy S. Welch,2013-10-24 This book argues that a well educated citizenry and freer flow of information has contributed to a state of hyperdemocracy which impedes itself This book applies the idea of reflexive modernization to democratic theory setting out a new perspective on the challenges democracy faces

Natural Science and the Origins of the British Empire Sarah Irving,2015-09-30 Represents a history of the British Empire that takes account of the sense of empire as intellectual as well as geographic dominion the historiography of the British Empire with its preoccupation of empire as geographically unchallenged sovereignty overlooks the idea of empire as intellectual dominion

Beyond the Meme Alan C. Love,William Wimsatt,2019-09-03 Interdisciplinary perspectives on cultural evolution that reject meme theory in favor of a complex understanding of dynamic change over time How do cultures change In recent decades the concept of the meme posited as a basic unit of culture analogous to the gene has been central to debates about cultural transformation Despite the appeal of meme theory its simplification of complex interactions and other inadequacies as an explanatory framework raise more questions about cultural evolution than it answers In *Beyond the Meme* William C Wimsatt and Alan C Love assemble interdisciplinary perspectives on cultural evolution providing a nuanced understanding of it as a process in which dynamic structures interact on different scales of size and time By focusing on the full range of evolutionary processes across distinct contexts from rice farming to scientific reasoning this volume demonstrates how a thick understanding of change in culture emerges from multiple disciplinary vantage points each of which is required to understand cultural evolution in all its complexity The editors provide an extensive introductory essay to contextualize the volume and Wimsatt contributes a separate chapter that systematically organizes the conceptual geography of cultural processes and phenomena Any adequate account of the transmission elaboration and evolution of culture must this volume argues recognize the central roles that cognitive and social development play in cultural change and the complex interplay of technological organizational and institutional structures needed to enable and coordinate these processes Contributors Marshall Abrams U of Alabama at Birmingham Claes Andersson Chalmers U of Technology Mark A Bedau Reed College James A Evans U of Chicago Jacob G Foster U of California Los Angeles Michel Janssen U of Minnesota Sabina Leonelli U of Exeter Massimo Maiocchi U of Chicago Joseph D Martin U of Cambridge Salikoko S Mufwene U of Chicago Nancy J Nersessian Georgia Institute of Technology and Harvard U Paul E Smaldino U of California Merced Anton T rnberg U of Gothenburg Petter T rnberg U of Amsterdam Gilbert B Tostevin U of Minnesota

Historia Scientiarum ,2005 **History of Oceanography** ,2006 *Secret Weapons and World War II* Walter E. Grunden,2005 Grunden s analysis of this fundamental flaw in the Japanese war effort seamlessly weaves together

science technology and military history to provide an entirely unique look at a crucial but understudied aspect of World War II Comparing the science and weapons programs of all the major combatants he demonstrates that Japan's failure was nearly inevitable given its paucity of strategic resources an inadequate industrial base the absence of effective centralized management to coordinate research military hostility toward civilian scientists and bitter interservice rivalries In the end Japan could not overcome these obstacles and thus failed to make the transition to the kind of Big Science it needed to ward off its enemies and dominate the Far East BOOK JACKET

A History of Medicine: Renaissance medicine Plinio Prioreschi, 1996 *International Social Science Journal*, 2001 The Question of Christian Philosophy Today Francis J. Ambrosio, 1999 Based on papers delivered at a conference held at Georgetown University in Fall 1993 The Question of Christian Philosophy Today probes different issues confronting Christian philosophy at the brink of the twenty first century from traditionalism to post modernism Together with excerpts from the question and answer session each paper and the concluding round table discussion are here preserved in five distinct sections The work taken as a whole is an exemplar of the meaning and spirit of where we can locate Christian philosophy today and what we can expect for its future Eidos, 1998

Women, Science and Sound in Nineteenth-century France Ingrid Sykes, 2007 This book deals with the substantial role performed by women in the sophisticated scientific and technological environment of nineteenth century France In a period marked by both radical experimentation and rich spiritual sensibility women interacted with the latest acoustical technologies to produce a striking language of sonority that reached a wide popular audience The author shows that a variety of sonorous spaces containing newly invented organ models the teacher training institution the convent and the salon became significant acoustic laboratories in which women were able to formulate and express their creativity in sound Rather than inhibiting their freedom of expression such spaces allowed women to negotiate social convention and mark their own unique contribution to acoustical science British Naturalists in China, 1760-1910 Fa-ti Fan, 1999
