*Self-Construction and the Formation of Human Values* Teodros Kiros,2001-01-30 This volume presents a theoretical defense of the potential of ordinary individuals to construct values and through them to become self empowering responsible participants in a democratic community Rather than conceiving of power as domination the author identifies true power as self empowerment a notion based on self construction He proposes the vision of an authentically free self filled with a compassion that is a composite of reason and feeling Such a composite self does not consciously manipulate language truth

and desire to dominate and subordinate other individuals but uses them to construct values and norms that can enrich others To support his argument the author draws on both classical and contemporary philosophers as well as on literary sources

**Innovating Counseling for Self- and Career Construction** Jacobus Gideon (Kobus) Maree, 2020-06-29 This book sets out to provide context for innovating counseling for self and career construction It gives readers insight into the theory underlying an innovative integrative qualitative quantitative approach to career counseling Three key ideas recur throughout the book First the idea of not dispensing advice to people instead enabling them to advise themselves Second the idea of listening for instead of to people's stories to help them choose and construct careers and themselves and shape their career identities Third the idea of helping people connect what they know about themselves consciously with what they are aware of subconsciously The book confronts some of the main challenges posed by Work 4 0

on the workplace but also foreshadows the imminent advent of Work 5.0. It endeavors to promote career counselors' ability to help people thrive at a time when many speculate that work itself is at risk; occupational contexts no longer hold workers in the way they used to, and the coronavirus pandemic is disrupting the workplace.

**Self-Healing Construction Materials**  
 Antonios Kanellopoulos, Jose Norambuena-Contreras, 2021-12-08. This book provides a thorough overview of all techniques for producing self-healing construction materials. Construction materials, cement-based bituminous metals and alloys, are prone to cracking, which with the progress of time can lead to compromising of the structural integrity of critical infrastructure. Self-healing materials form a new class of materials that have inbuilt engineered properties to counteract damage and repair it before it becomes critical. The methods for monitoring, modeling, and assessing self-healing are also reviewed. The final section of the book discusses the future outlook and potential extension of self-healing concepts to other materials, e.g., heritage structures and soils.
