

CONSTRUCTIVISM (LEARNING THEORY)

DEFINITION

The constructivist learning theory explains that we learn by 'constructing' knowledge in our minds through interaction with our environments. Constructivism argues that learners have an active role in thinking things through, mulling them over, and coming to logical conclusions. We also build on our prior knowledge, like a builder constructing his skyscraper.

KEY CONCEPTS

- Learning is a cognitive process
- We learn through experiences
- We learn through social interactions
- We use prior knowledge to make sense of new information
- Learning occurs in linear stages
- Students should learn actively rather than passively

Includes entries for maps and atlases **Constructivism and the Technology of Instruction** Thomas M. Duffy, David H. Jonassen, 2013-01-11 This book is about the implications of constructivism for instructional design practices and more importantly it is about a dialogue between instructional developers and learning theorists Working with colleagues in each discipline the editors were amazed to find a general lack of familiarity with each others work From an instructional design perspective it seems that the practice of instructional design must be based on some conception of how people learn and what it means to learn From a learning theory perspective it seems obvious that the value of learning theory rests in the ability to predict the impact of alternative learning environments or instructional practices on what is learned Thus the interchange of ideas between these disciplines is essential As a consequence of both the information rich environment and the technological capability business is seen moving away from a fixed curriculum and toward providing information and instruction when it is needed These changes bring about a window of opportunity establishing a dialogue that will provide for a richer understanding of learning and the instructional environment required to achieve that learning The editors hope that this book is the beginning of the conversation and that it will serve to spur continued conversation between those involved in learning theory and those involved in the design of instruction
