Sequencing and Phylogenetic Analysis as a Tool in Molecular Epidemiology of Veterinary Infectious Diseases, volume II Iryna Goraichuk, Amro Hashish , Mohamed H. Maarouf, 2025-12-03 The development of sequencing technologies dramatically changed the course of epidemiological studies of infectious diseases Virus genomics have already been used to investigate infectious disease outbreaks for several decades Since the introduction of Next generation Sequencing NGS the viral or bacterial whole genomes can be sequenced in a matter of days Now thanks to advances in high throughput sequencing and decreasing costs most virus genomics studies utilize data sets containing tens to thousands of complete genomes While well established sequencing platforms still provide robust insights the real time sequencing approaches and analysis opens up entirely new applications in the field of molecular epidemiology The advances in genome sequence technologies have improved the ability to track and understand the bacterial and viral transmission of animal diseases Phylogenetic analysis of these genomes can be used to clarify the key questions in infectious disease epidemiology from the initial detection and characterization of outbreak viruses to transmission chain tracking and outbreak mapping which can now be much more accurately addressed using recent advances in virus sequencing and phylogenetics The threat of emerging and re emerging infectious diseases continues to be a challenge to public and global health security as well as animal health and highlights that sequencing is not just a critical tool in bio surveillance it can also play a major role in pandemic or outbreak response The scope of the Research Topic is to explore the current status and future perspectives of sequencing technologies in the control and prevention of infectious diseases including the elucidation of diagnosis molecular evolution distribution and transmission of important veterinary infectious diseases The collection welcomes but is not limited to Original Research Methods and Reviews in the following areas Molecular surveillance of specific infections at the local national and international levels Rapid detection and characterization of emerging pathogens Whole and partial genome sequencing of viral and bacterial isolates Short and long read sequencing approaches for infectious diseases control and prevention Development of new bioinformatic tools for NGS data analysis Volume I Sequencing and Phylogenetic Analysis as a Tool in Molecular Epidemiology of Veterinary Infectious Diseases *Library of Congress Subject Headings* Library of Congress, 2011 **The**

application of new technologies such as new vaccines, therapeutic cytokines and antibodies, and antiviral drugs in the prevention and treatment of animal infectious diseases Guoxin Li,Lingxue Yu ,Jin Cui,2025-12-05

The outbreak of the epidemic has continuously refreshed human understanding of various pathogens and the pandemic of infectious diseases has caused more serious damage to human public health and socio economic development Up to now there is no specific antiviral drug for most viral infections and vaccination is the excellent weapon to effectively control epidemics and even eliminate infectious diseases However due to the strong mutation ability of viruses especially RNA viruses and the insufficient research on the pathogenic mechanism and immune mechanism of viral infections the application of traditional vaccine technology may not be effective in dealing with new pathogens with no characteristics In addition traditional vaccines also have disadvantages such as high preparation costs long research and development cycles and may not induce protective responses Based on the above facts establishing a new vaccine technology and a universal vaccine technology platform that can quickly develop and produce a large number of affordable vaccines has become an urgent research topic to be solved In recent years with the continuous development of science and technology various new technologies have developed rapidly This Research Topic will focus on the widespread application of new technologies such as targeted attenuated vaccine technology genetic engineering vaccines peptide antigen vaccines viral vector vaccines nucleic acid vaccine technology new adjuvant technologies the development of therapeutic cytokines and antibodies as well as antiviral drugs providing new hope and choices for the prevention and treatment of various animal diseases We welcome you to provide relevant research articles comments and original research
