Cyber Security in the Age of Artificial Intelligence and Autonomous Weapons Mehmet Emin Erendor, 2024-11-19

Although recent advances in technology have made life easier for individuals societies and states they have also led to the emergence of new and different problems in the context of security In this context it does not seem possible to analyze the developments in the field of cyber security only with information theft or hacking especially in the age of artificial intelligence and autonomous weapons For this reason the main purpose of this book is to explain the phenomena from a different perspective by addressing artificial intelligence and autonomous weapons which remain in the background while focusing on cyber security By addressing these phenomena the book aims to make the study multidisciplinary and to include authors from different countries and different geographies The scope and content of the study differs significantly from other books in terms of the issues it addresses and deals with When we look at the main features of the study we can say the following Handles the concept of security within the framework of technological development Includes artificial intelligence and radicalization which has little place in the literature Evaluates the phenomenon of cyber espionage Provides an approach to future wars Examines the course of wars within the framework of the Clausewitz trilogy Explores ethical elements Addresses legal approaches In this context the book offers readers a hope as well as a warning about how technology can be used for the public good Individuals working in government law enforcement and technology companies can learn useful lessons from it

Innovative Strategies for Enhancing Crop Resilience Against Plant Viral Diseases Chellappan

Padmanabhan, Fuh-Jyh Jan, 2025-03-14 Plant virus diseases represent a significant challenge in the field of agricultural science impacting crop productivity and causing substantial economic losses globally As the world population continues to grow the demand for increased crop yields intensifies necessitating innovative solutions to safeguard food security Traditional breeding methods while effective are often time consuming and labor intensive Recent advancements in molecular breeding genome sequencing and pathogen identification technologies have opened new avenues for enhancing crop resilience against viral pathogens Despite these advancements there remain critical gaps in our understanding of plant virus interactions the mechanisms of viral pathogenesis and the development of effective control strategies Addressing these gaps is essential for ensuring sustainable agricultural practices and food security This Research Topic aims to explore the pathogenesis of plant viruses advanced detection methods and innovative control strategies to protect crops from viral diseases The primary objective is to foster research that delves into the molecular mechanisms of plant virus interactions the development of precise diagnostic tools and the application of cutting edge technologies such as genome editing for disease resistance By answering key questions and testing hypotheses related to these areas the research seeks to contribute to the development of robust strategies for managing plant viral diseases
