Artificial Intelligence Valuation Roberto Moro-Visconti, 2024-06-01 The book discusses the main valuation methodologies of artificial intelligence. AI Company valuation goes hand in hand with estimating intangible assets like AI, which are linked to higher risk and lower collateral value. Their accounting is controversial, and the most widely used valuation approaches are based on market income or cost-related metrics. The volume discusses in detail the valuation approaches such as the discounted cash flows, remembering that cash is king, or the empirical market multipliers and comparables. The approaches are complemented by several models, including advanced business planning that incorporates machine learning, digital scalability, networks, or validating blockchains. The book, with a tailor-made theoretical background backed by empirical cases, shows how to evaluate AI products such as chatbots or virtual assistants for AI established producers, startups, or traditional brick and mortar AI users. The comprehensive set of techniques and methodologies will interest researchers, students, and practitioners in corporate finance, intellectual property valuation, and financial technology.
