**Surveillance Education** Nolan Higdon,Allison Butler,2024-08-02 Surveillance Education explores the pervasive use of digital surveillance technologies in schools and assesses its pernicious effects on students Recognizing that the use of digital technologies will persist the authors instead offer practical ways to ameliorate their impact In our era of surveillance capitalism digital media technologies are ever more intertwined into the educational process Schools are presented with digital technologies as tools of convenience for gathering and grading student work as tools of support to foster a more equitable learning environment and as tools of safety for predicting or preventing violence or monitoring mental emotional and physical health Despite a dearth of evidence to confirm their effectiveness digital data collection and tracking is often presented as a way to improve educational outcomes and safety This book challenges these fallacious assumptions and argues that the use of digital media

technologies has caused great harm to students by subjecting them to oppressive levels of surveillance impinging upon their right to privacy and harvesting their personal data on behalf of Big Tech In doing so the authors draw upon interviews from K 12 and higher education students teachers and staff civil rights and technology lawyers and educational technological programmers The authors also provide practical guidance for teachers administrators students and their families seeking to identify and combat surveillance in education This urgent eye opening book will be of interest to students and educators with interests in critical media literacy and pedagogy and the sociology of technology and education Education and Technological Unemployment Michael A. Peters, Petar Jandrić, Alexander J. Means, 2019-04-29 This book examines the challenge of accelerating automation and argues that countering and adapting to this challenge requires new methodological philosophical scientific sociological economic ethical and political perspectives that fundamentally rethink the categories of work and education What is required is political will and social vision to respond to the question What is the role of education in a digital age characterized by potential mass technological unemployment Today s technologies are beginning to cost more jobs than they create and this trend will continue There have been many proposed solutions to this problem and they invariably involve an educational vision Yet in a world that simply doesn t offer enough work for everyone education is clearly not a panacea for technological unemployment This collection presents responses to this question from a wide spectrum of disciplines including but not limited to education studies philosophy history politics sociology psychology and economics
