are two basic concepts there are synthetic things and analytic things Synthetic things are based on ideas Analytic things are about things that actually exist That s a bit simple but it is all we need at the moment How is it that we can know about things that exist We have to be able to describe them It s that simple This last book covers the subject of managing uncertainty It is both a text book and a reference book on the application of Dempster Shafer theory that has commanded a lot of attention in the business community There is not much written on using the techniques and that is unfortunate The methods are extremely powerful and management and technical persons should know of their existence A math background is not required to read and use the methods even though some math descriptive techniques are necessary for efficiency of expression Actually the reader only needs to find out what can be done without having to actually do it Finally have a pleasurable reading You deserve it
