Images, Reality, and Digital Culture Krešimir Purgar, 2025-09-30 Focusing on the moment of transition from the pictorial to the post pictorial condition this book advocates the opinion that what fundamentally distinguishes pictorial representation in Western civilization is one's ability to distinguish what the picture shows from what the picture refers to and to that extent the reality inside the picture cannot be confused with what is outside it The contributions in this book serve as kind of a missing link connecting the genealogy of traditional images with contemporary environmental visualizations in the world that in this very moment undergoes a transition into a new exciting age in which many old knowledges are rapidly becoming obsolete and new ones are seeking their legitimacy Instead of leading the reader to reconciliation with the fatal diagnosis of the world under the rule of technological determinism this book indicates the key points of transition between the pictorial representation that traditionally belonged to the history of art and the virtual presence that is approached in quite different ways today This book will be of interest to scholars working in art history image philosophy image studies and digital studies

Artificial Intelligence and Photography Stuart Oring, 2025-09-15. This book shows how artificial intelligence can be used as an effective medium in order to help the photographer create interesting and expressive photographs. By using an Image Generator, it is possible to create images that express ideas and concepts through written text. This book shows many examples of photographs made in this manner. It explains the strengths and weaknesses of this technology at the present time, as well as some interesting possibilities that Artificial Intelligence opens up for the creative photographer. Using this process, I was able to create many different kinds of photographs, including Documentary Photographs, Surreal Photographs, Multiple Exposure Photographs, Fantasy Photographs, Landscapes, Abstract Photographs, and Portraits, etc. The photographer works with the Image Generator in partnership. He must carefully plan and visualize the photograph in order to communicate his visual ideas to a picture audience. The next step is to carefully describe in writing his ideas, and the Image Generator converts the written text to a visual image. Then the image can be enhanced by the photographer by means of Photoshop or an enhancement software that uses Artificial Intelligence in order to improve the quality of the image.
