## **Cruise Missile Technology Strategy And Politics:**

Cruise Missiles Richard K. Betts, 1981 The cruise missile is the principal innovation in U S weaponry in the early 1980s Because it is inexpensive and versatile it is likely to be used for a wide range of military missions At the same time it has become a delicate issue in arms control and alliance politics Although cruise missile programs are among the most dynamic elements in the U S defense buildup their consequences have not been fully appreciated This book assesses the complex set of technological budgetary strategic diplomatic and political implications of this new weapon as a contribution to public understanding of its pervasive influence on diplomacy and military affairs Cruise missile technology and development programs are dealt with in chapters by John C Toomay Godron MacDonald Jack Ruina and Mark Balaschak Ron Huisken and John C Baker Military uses and arm control implications are discussed by Bruce Bennett and James Foster Roger H Palin Richard Burt Michael McGwire George H Quester and William H Kinkade Diplomatic and national political questions are analyzed by Raymond L Garthoff Robert J Art and Stephen E Ockenden Gregory F Treverton Lawrence D Freedman and Catherine McArdle Kelleher *Cruise Missiles* ,1981 **Cruise missiles, technology, strategy, politics** ,1978

What explains the current US arsenal of unmanned systems Why for example is the contemporary arsenal dominated by aerial unmanned systems versus the munitions that dominated earlier developments This book challenges traditional explanations for the proliferation of unmanned systems which focus on capacity or structure Instead this book argues that beliefs and identities shape the structures and capacities we choose when we are investing in weapon systems In particular it traces beliefs about technological determinism and military revolutions force protection and casualty aversion and service identities to explain why the US has invested so heavily in remote controlled unmanned aerial platforms over the last three decades In doing so the book illustrates how ideas become influence and ultimately manifest in budget lines detailing the policy entrepreneurs critical junctures and path dependencies that shape the lifecycle of beliefs about unmanned weapon systems The book begins by providing a historical overview of US unmanned systems investments taking an expansive view of unmanned technologies from land mines to missiles and drones from the revolutionary war to contemporary investments It then leans on theories of norms ideas and influence to detail the role of the Office of Net Assessment Vietnam 9 11 and armed service identity in building the US current unmanned arsenal Finally it concludes with what this case of unmanned technologies reveals about US support to Ukraine as well as contemporary weapons debates about cyber information technology space and hypersonic missiles **Air University Review** ,1982 New York University Journal of International Law & Politics New York University.
