Crystal Growth For Beginners Fundamentals Of Nucleation Crystal Growth And Epitaxy:

Crystal Growth for Beginners Ivan V. Markov, 2003 This is the first ever textbook on the fundamentals of nucleation crystal growth and epitaxy It has been written from a unified point of view and is thus a non eclectic presentation of this interdisciplinary topic in materials science The reader is required to possess some basic knowledge of mathematics and physics All formulae and equations are accompanied by examples that are of technological importance The book presents not only the fundamentals but also the state of the art in the subject The second revised edition includes two separate chapters dealing with the effect of the Enrich Schwoebel barrier for down step diffusion as well as the effect of surface active species on the morphology of the growing surfaces In addition many other chapters are updated accordingly Thus it serves as a valuable reference book for both graduate students and researchers in materials science
