## **Crystal Fields For Transitionmetal Ions In Laser Host Materials:**

**Crystal Fields for Transition-Metal Ions in Laser Host Materials** Clyde A. Morrison, 2012-12-06 A researcher trying to predict or interpret spectra of transition metal ions in possible laser host materials is confronted with a variety of different methods of describing the same physical situation This book provides a systematic approach to the applied theory of crystal field interactions of transition metal ions in 49 crystalline hosts that are or show promise of being good laser materials The tables that make up the main part of the book present the experimentally determined parameters of the 3dN 4dN and 5dN transition metal ions in the second third and fourth ionization states These parameters have been converted to Slater and crystal field parameters The book is a source for research workers in laser development and in crystal field theory and for graduate students of solid state chemistry and physics

**Physics of Solid-State Laser Materials** Richard C. Powell, 1998-03-27 This graduate level text presents the fundamental physics of solid state lasers including the basis of laser action and the optical and electronic properties of laser materials After an overview of the topic the first part begins with a review of quantum mechanics and solid state physics spectroscopy and crystal field theory it then treats the quantum theory of radiation the emission and absorption of radiation and nonlinear optics concluding with discussions of lattice vibrations and ion ion interactions and their effects on optical properties and laser action The second part treats specific solid state laser materials the prototypical ruby and Nd YAG systems being treated in greatest detail and the book concludes with a discussion of novel and non standard materials Some knowledge of quantum mechanics and solid state physics is assumed but the discussion is as self contained as possible making this an excellent reference as well as useful for independent study

**Theoretical Spectroscopy of Transition Metal and Rare Earth Ions** Mikhail G. Brik, Ma Chong-Geng, 2019-12-11 This book describes in detail the main concepts of theoretical spectroscopy of transition metal and rare earth ions It shows how the energy levels of different electron configurations are formed and calculated for the ions in a free state and in crystals how group theory can help in solving main spectroscopic problems and how the modern DFT based methods of calculations of electronic structure can be combined with the semi empirical crystal field models The style of presentation makes the book helpful for a wide audience ranging from graduate students to experienced researchers Performance of optical materials crucially depends on the impurity ions intentionally introduced into the crystalline host materials The color of these materials their emission and absorption spectra can be understood by analyzing the relations between the electronic properties of impurity ions and host crystal structure which constitutes the main content of this book It describes in detail the main concepts of theoretical spectroscopy of transition metal and rare earth ions
