Liquid Crystalline Polymers Vijay Kumar Thakur, Michael R. Kessler, 2015-08-25 This book introduces various applications of liquid crystalline polymers as the emerging new class of high performance novel materials. The authors detail the advantageous properties of these LCs including optical anisotropic transparency and easy control over structure. This interdisciplinary work includes valuable input from international projects with special focus on the use of liquid crystalline polymers and or nanocomposites.

Crystalline Lasers Alexander Kaminskii, 2020-09-10 By the end of the 1970s crystalline lasers were widely used in science engineering medicine and technology. The types of lasers used have continued to grow in number to include newly discovered crystalline hosts previously known compounds generating at other spectral wavelengths and broadband tunable stimulated emission. This has led to the creation of an extremely promising new generation of crystalline lasers that are both highly efficient and more reliable. The major part of this book is devoted to describing multilevel operating laser schemes for stimulated emission excitation in insulating crystals doped with lanthanide ions. The first part of Crystalline Lasers deals with the history of the physics and spectroscopy of insulating laser crystals. The chapters in the second part of the book present results from the study of Stark energy levels of generating ions in laser crystals and their radiative and nonradiative intermanifold transition characteristics. This section includes extensive tabular data and reference information. Popular and novel operating schemes of crystalline lasers are covered in Part 3. In the chapters in the fourth part of the book the newest technologies in the physics and engineering of crystalline lasers are considered. The results of investigations into laser action under selective excitations miniature crystalline lasers and the properties of nonlinear activated laser crystals are presented and analyzed. Crystalline Lasers summarizes and reviews the results of many years of research and studies of activator ions and multilevel operating laser schemes and discusses exciting prospects of using these systems to create new types of crystalline lasers. This book will be of use to laser scientists and engineers, physicists and chemical engineers.

Liquid Crystalline Polymers Xin-jiu Wang, Qi-feng Zhou, 2004-04-14 This textbook consists of six chapters. The first chapter highlights the concept of liquid crystals including chemical structure phase classification defect and texture and continuum theory. It has been carefully written to meet the needs of readers who do not specialize in liquid crystals. The second chapter is related to the theoretical description of liquid crystalline polymers networks and gels which deals with subjects such as the formation of liquid crystallinity in the polymer system the phase transition and phase diagram the molecular weight effect chain conformation physics properties etc. In Chapter 3 the molecular engineering of liquid crystalline polymers is introduced. The molecular composition and the molecular weight play essential roles in the molecular design which are reviewed in detail. In addition some unusual liquid crystalline polymers are

discussed Chapter 4 is devoted to the phase identification of liquid crystalline polymers The techniques involved cover polarizing microscopy thermal analysis X ray diffraction and other areas Chapters 5 and 6 summarize the properties and applications of liquid crystalline polymers Chapter 5 deals mainly with mechanical performance in fiber and composites Chapter 6 presents the elasticity viscosity and rheology of liquid crystalline polymers as well as other important properties
