Crystals For Magnetic Applications:

Crystals for Magnetic Applications C.J.M. Rooijmans, 2012-12-06 Springer Verlag Berlin Heidelberg in conjunction with Springer Verlag New York is pleased to announce a new series CRYSTALS Growth Properties and Applications The series will present critical reviews of recent developments in the field of crystal growth properties and applications A substantial portion of the new series will be devoted to the theory mechanisms and techniques of crystal growth Occasionally clear concise complete and tested instructions for growing crystals will be published particularly in the case of methods and procedures that promise to have general applicability Responding to the ever increasing need for crystal substances in research and industry appropriate space will be devoted to methods of crystal characterization and analysis in the broadest sense even though reproducible results may be expected only when structures microstructures and composition are really known Relations among procedures properties and the morphology of crystals will also be treated with reference to specific aspects of their practical application In this way the series will bridge the gaps between the needs of research and industry the possibilities and limitations of crystal growth and the properties of crystals Reports on the broad spectrum of new applications in electronics laser technology and nonlinear optics to name only a few will be of interest not only to industry and technology but to wider areas of applied physics as well and to solid state physics in particular In response to the growing interest in and importance of organic crystals and polymers they will also be treated

Photonic Crystal and Its Applications for Next Generation Systems Shanmuga Sundar Dhanabalan, Arun Thirumurugan, Ramesh

Raju, Sathish-Kumar Kamaraj, Sridarshini Thirumaran, 2023-07-07 This book covers the advanced fabrication techniques challenges and applications of photonic crystals for next generation systems in various applications such as high speed networks photonic integrated circuits health care sensors energy and environmental This book highlights the literature and works put forward by various scientists researchers and academicians in photonic crystals and their real time applications The content of the book appeals to readers such as students researchers and industrial engineers who are working in the design and development of photonics based concepts components and devices for various applications

Theoretical Foundations and Application of Photonic Crystals Alexander Vakhruhev, 2018-04-04 This book is devoted to the description of research and design of photonic crystals Topics included in the book cover a wide range of research in the field of theoretical analysis and experimental investigation the electromagnetic field in the photonic crystal propagation of waves in the gyrotropic magnetophotonic crystals low one photon absorption ultratransparent photonic crystals colloidal assembly photonic crystal application for development of all optical computational system design strategies for PC devices self organization of liquid crystalline nanostructures and optical diodes This book will be useful for engineers technologists researchers and postgraduate students interested in the research design fabrication processes and applications of photonic crystals

Silicon Chemical Etching J. Grabmaier, 2012-12-06 In the first contribution to this volume we read that the world

wide production of single crystal silicon amounts to some 2000 metric tons per year. Given the size of present day silicon crystals this number is equivalent to 100000 silicon crystals grown every year by either the Czochralski 80% or the floating zone 20% technique. But to the best of my knowledge no coherent and comprehensive article has been written that deals with the art and science as well as the practical and technical aspects of growing silicon crystals by the Czochralski technique. The same could be said about the floating zone technique were it not for the review article by W Dietze, W Keller and A Mißbauer which was published in the preceding Volume 5 Silicon of this series and for a monograph by two of the above authors published about the same time. As editor of this volume I am very glad to have succeeded in persuading two scientists W Zulehner and D Huber of Wacker Chemitronic GmbH the world's largest producer of silicon crystals to write a comprehensive article about the practical and scientific aspects of growing silicon crystals by the Czochralski method and about silicon wafer manufacture. I am sure that many scientists or engineers who work with silicon crystals be it in the laboratory or in a production environment will profit from the first article in this volume.

Shaped Crystals Tsuguo Fukuda, Valery I. Chani, 2007-08-10. This volume offers an overview of the growth of shaped crystals oxides fluorides etc by the micro pulling down technique. Both melt and solution flux growth are considered. The advantages and disadvantages of the method are discussed in detail and compared with related crystal growth processes. The authors attempt to give a practical introduction to this technique thereby also explaining how its application can help to solve problems commonly encountered in other melt growth methods.
