Actuality Inferences Prerna Nadathur, 2023-03-15 This book investigates the phenomenon of actuality inferences in which claims of ability are in certain temporal contexts interpreted as descriptions of actual events instead of as descriptions of potentialities or possibilities Although actuality inferences evidently arise in the interaction between modality and aspect they have long resisted compositional explication in standard treatments of these semantic categories Prerna Nadathur here pursues a new approach in which actuality inferences are linked to a novel component in the semantics of ability causal dependence relations The account is developed through a comparative crosslinguistic semantic analysis of three predicate classes that license similar inferences implicative verbs in Finnish and English enough too predicates in French and English and modal ability predicates in French Hindi and English Similarities in the inferential profiles of these predicates are tied to their shared causal background structure while their differences including in sensitivity to grammatical aspect derive from differences in asserted content and associated aspectual class contrasts The central argument is that a complex causal structure for ability interacts with the compositional requirements of aspect to derive the observed actuality ability ambiguity The volume shows that causal structure and causal relationships shape patterns of linguistic inference beyond the overtly causal domain and thus contributes to a new and growing body of research in which formal computational causal models are employed as an analytic tool for lexical and compositional semantics **Seneca Philosophus** Julia Wildberger, Marcia L.
