Crystal Pulling From The Melt:

Crystal Pulling from the Melt Donald T.J. Hurle, 1993-09-28 Crystal pulling is an industrial process and provides the bulk of semiconductor crystals for the semiconductor industry Initially a purely empirical process the increase in importance and size of the industry has led to basic research into the fundamentals of the process particularly the modelling of heat and mass transfer The book has been written by the recognized authority on Czochralski crystal growth techniques It is an attempt to strengthen the interface between the practical crystal grower and the applied mathematician involved in analytical and computer modelling Its focus is on the physics chemistry and metallurgy of the process From reviews There is a need for a modern non trivial text on Czochralski growth and Dr Hurle is eminently suited to write such a text Dr Hurle is probably uniquely qualified to write a book on the Czochralski growth process He has published a great deal of very substantial as well as innovative work in this area
