Poor Technology Levi Checketts,2024-01-23 In recent years artificial intelligence AI has moved in popular discourse from the purview of science fiction imaginings to the key financial sector of the twenty first century As world powers trillion dollar companies and public intellectuals emphasize the importance of AI the general concerns people raise relate to economic movement control bias and safety This book adds a further concern namely the way our approach to AI reinforces assumptions about dignity and personhood tied to the sort of thinking that is characteristic of bourgeois capitalists The experience of poverty reveals that people who are poor do not think the same way as the upper classes their experience of the world must be understood through the reality of survival within resource scarce settings and the attendant domination and discrimination that come with being poor These experiences do not fit well with the ideal choice selection model that underlies AI modeling and numerous failures of AI to help the poor demonstrate that those who benefit primarily from AI are those who already live well As a result the fervor surrounding AI often serves to dehumanize the poor by eliminating employment opportunities automating social work reinforcing biases and prioritizing profit over stability Worst of all however AI functions to satisfy a psychological need for us to have others against whom we can distinguish ourselves without having to feel guilty about the reality of the struggle of the poor Taking seriously the theological perspective of the preferential option for the poor this work contends that to avoid relegating poor people to nonhuman status we must be willing to put aside the fantasy that AI is intelligent and focus rather on the all too human embodied reality of the poor **Artificial Historians** Marnie Hughes-Warrington,Anne Martin,Lewis Yarlupurka O'Brien,2025-08-08 This book offers readers an introduction to the world of artificial histories and historians It looks behind the interfaces of AI and explores everyday platforms and prize winning history books to identify how people and algorithms make histories and how they might make histories in the future Every moment around the globe histories are made about ordinary people who use digital devices These histories are not made by professional historians or even by humans but by artificial intelligence that scours our digital footprints for patterns AI histories not only shape recommendations about what we might buy or stream but also our access to education healthcare and justice The outcomes of recommendation systems are not just a technology problem or an ethics problem This book argues that this is also a history problem and it needs to be understood as one if we are to make fairer or more just systems It shows us that the deep history of history making including Australian Aboriginal and First Nations histories can help us to navigate the future of history in AI Presenting readers with a range of familiar and accessible examples Artificial Historians is a valuable resource for students scholars and all those interested in global historiography technology and artificial intelligence Popular Science ,1986-05 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **Popular Science**
