Deep Learning for Healthcare Decision Making Vishal Jain,Jyotir Moy Chatterjee,Ishaani Priyadarshini,Fadi Al-Turjman,2023-02-10 Health care today is known to suffer from siloed and fragmented data delayed clinical communications and disparate workflow tools due to the lack of interoperability caused by vendor locked health care systems lack of trust among data holders and security privacy concerns regarding data sharing The health information industry is ready for big leaps and bounds in terms of growth and advancement This book is an attempt to unveil the hidden potential of the enormous amount of health information and technology Throughout this book we attempt to combine numerous compelling views guidelines and frameworks to enable personalized health care service options through the successful application of deep learning frameworks The progress of the health care sector will be incremental as it learns from associations between data over time through the application of suitable AI deep net frameworks and patterns The major

challenge health care is facing is the effective and accurate learning of unstructured clinical data through the application of precise algorithms. Incorrect input data leading to erroneous outputs with false positives is intolerable in healthcare as patients' lives are at stake. This book is written with the intent to uncover the stakes and possibilities involved in realizing personalized health care services through efficient and effective deep learning algorithms. The specific focus of this book will be on the application of deep learning in any area of health care including clinical trials, telemedicine, health records management, etc.

Artificial Intelligence and Internet of Things in Smart Farming Mohamed Abdel-Basset, Hossam Hawash, Laila Abdel-Fatah, 2024-04-01. This book provides a broad overview of the areas of artificial intelligence (AI) that can be used for smart farming applications through either successful engineering or ground breaking research. Among them, the highlighted tactics are soil management, water management, crop management, livestock management, harvesting, and the integration of Internet of Things (IoT) in smart farming. Artificial Intelligence and Internet of Things in Smart Farming explores different types of smart farming systems for achieving sustainability goals in the real environment. The authors discuss the benefits of smart harvesting systems over traditional harvesting methods, including decreased labor requirements, increased crop yields, increased probabilities of successful harvests, enhanced visibility into crop health, and lower overall harvest and production costs. It explains and describes big data in terms of its potential five dimensions: volume, velocity, variety, veracity, and valuation within the framework of smart farming. The authors also discuss the recent IoT technologies such as fifth generation networks, blockchain, and digital twinning to improve the sustainability and productivity of smart farming systems. The book identifies numerous issues that call for conceptual innovation and has the potential to progress machine learning (ML) resulting in significant impacts. As an illustration, the authors point out how smart farming offers an intriguing field for interpretable ML. The book then delves into the function of AI techniques such as AI in accelerating the development of nano-enabled agriculture, thereby facilitating safe-by-design nanomaterials for various consumer products and medical applications. This book is for undergraduate students, graduate students, researchers, and AI engineers who pursue a strong understanding of the practical methods of machine learning in the agriculture domain. Practitioners and stakeholders would be able to follow this book to understand the potential of ML in their farming projects and agricultural solutions.

Features: Explores different types of smart farming systems for achieving sustainability goals in the real environment. Explores ML-based analytics such as generative adversarial networks (GAN), autoencoders, computational imaging, and quantum computing. Examines the development of intelligent machines to provide solutions to real-world problems, emphasizing smart farming applications which are not modeled or are extremely difficult to model mathematically. Emphasizes methods for better managing crops, soils, water, and livestock, urging investors and businesspeople to occupy the existing vacant market area. Discusses AI-empowered nanotechnology for smart farming.
