Proven Ai Image Generator With Low Investment:

Radiomics and artificial intelligence in radiology and nuclear medicine Giorgio Treglia,Salvatore Annunziata,2023-06-14

Making Media Futures Phillip H. Roth,Ana María Guzmán Olmos,Alin Olteanu,Stefan Bösch,2025-04-22 Making Media Futures offers a multi perspectival exploration of how imaginaries and knowledge of the future are constructed in and through various media The volume addresses the discursive dimensions of imaginaries and future visions as well as the impact of technological material and cultural conditions on the propagation of future discourses through media Providing both theoretically detailed and empirically rich investigations the contributions offer a wide range of cases spanning the century from the end of World War II until today and looking at examples from the Southern Hemisphere as well as the Global North Bringing together scholars in media studies science and technology studies STS and the history and philosophy of technology the chapters discuss future visions and imaginations of quantum computing the uncertainty and impact of AI based text to image generation the ideology behind 5G telecommunication standards imaginaries of the Internet of Things transmedia strategies in global and local climate protests how broadcast radio was implicated in the evangelical mission imaginary and how early visions of automating scholarly information management shaped standards and ideals of academia The volume thus complements existing approaches and analytical frameworks for the study of imaginaries and futures discourses with perspectives that are sensitive to the plurality of media specific conditions and technologies The book will interest students and scholars working in media studies STS history and philosophy as well as at the intersection of engineering humanities and social sciences on matters such as sustainability ethics and responsible innovation **Pushing**

Frontiers - Imaging For Photon Science Jiaguo Zhang,Iain Sedgwick,Cornelia B. Wunderer,2024-12-24 Developments of cutting edge X ray imaging detectors are largely driven by experiments at the large photon science facilities i e the synchrotron radiation sources and free electron lasers FELs which enable a wealth of investigations in physics material science biology chemistry environmental sciences and beyond The next generation radiation sources namely diffraction limited storage rings DLSR and high repetition rate FELs operated in the continuous wave CW mode not only offer brilliant opportunities for research but also pose new challenges and requirements for the X ray detectors required to exploit them fully Examples include the high count rate capability required at the DLSRs the ultra high continuous frame rate and data throughput at the FELs and a broad photon energy range from tens of eV to hundreds of keV spanned by the facilities In order to meet the new requirements posed by the most advanced photon science facilities envisioned or already under development around the world today various novel photon detection and imaging concepts are being investigated and detector technologies are advancing fast The goal of this research topic is to address the challenges and discuss the critical problems encountered in imaging systems for photon science including but not limited to sensing materials ASICs readout electronics detector systems and data reduction Moreover it will encompass a discussion of the development strategies

technological advances and recent achievements of each subject thereby facilitating the realization of complete concepts for novel imaging systems as well as further developments of individual detector technologies

Artificial Intelligence and Internet of Things in Smart Farming Mohamed Abdel-Basset, Hossam Hawash, Laila Abdel-Fatah, 2024-04-01 This book provides a broad overview of the areas of artificial intelligence AI that can be used for smart farming applications through either successful engineering or ground breaking research Among them the highlighted tactics are soil management water management crop management livestock management harvesting and the integration of Internet of Things IoT in smart farming Artificial Intelligence and Internet of Things in Smart Farming explores different types of smart farming systems for achieving sustainability goals in the real environment The authors discuss the benefits of smart harvesting systems over traditional harvesting methods including decreased labor requirements increased crop yields increased probabilities of successful harvests enhanced visibility into crop health and lower overall harvest and production costs It explains and describes big data in terms of its potential five dimensions volume velocity variety veracity and valuation within the framework of smart farming The authors also discuss the recent IoT technologies such as fifth generation networks blockchain and digital twinning to improve the sustainability and productivity of smart farming systems The book identifies numerous issues that call for conceptual innovation and has the potential to progress machine learning ML resulting in significant impacts As an illustration the authors point out how smart farming offers an intriguing field for interpretable ML The book then delves into the function of AI techniques such as AI in accelerating the development of nano enabled agriculture thereby facilitating safe by design nanomaterials for various consumer products and medical applications This book is for undergraduate students graduate students researchers and AI engineers who pursue a strong understanding of the practical methods of machine learning in the agriculture domain Practitioners and stakeholders would be able to follow this book to understand the potential of ML in their farming projects and agricultural solutions Features Explores different types of smart farming systems for achieving sustainability goals in the real environment Explores ML based analytics such as generative adversarial networks GAN autoencoders computational imaging and quantum computing Examines the development of intelligent machines to provide solutions to real world problems emphasizing smart farming applications which are not modeled or are extremely difficult to model mathematically Emphasizes methods for better managing crops soils water and livestock urging investors and businesspeople to occupy the existing vacant market area Discusses AI empowered Nanotechnology for smart farming
