Proceedings of the International Conference on Advanced Research in Electronics and Communication Systems (ICARECS 2025) A. Shirly Edward, Rahul Krishnan, P. Nagarajan, M I Anju, Muzammil Bin Jusoh, 2025-06-29 This open access volume presents the select proceedings of International Conference on Advanced Research in Electronics and Communication Systems ICARECS 2025 Various topics covered in this volume are Artificial Intelligence 5G Technology and Implementations MIMO and Multi antenna communications Internet of Things Devices Cognitive and Software Defined Radio Biomedical Signal Processing Signal Processing for Communications VLSI Signal Processing Radar and Sonar Signal Processing Speech Processing and Recognition Cryptography Security and Privacy algorithms AI powered Smart Electronics 6G and Beyond Emerging Technologies and Applications Cloud Based Networks Low Power Wide Area Networks LPWAN for IoT Machine Learning in Communication Systems Blockchain for Secure and Transparent Communication Artificial Intelligence for Network Optimization etc **Artificial Intelligence and Machine Learning for Industry 4.0 M.**

Thirunavukkarasan, S. A. Sahaaya Arul Mary, Sathiyaraj R., G. S. Pradeep Ghantasala, Mudassir Khan, 2025-06-10 This book is essential for any leader seeking to understand how to leverage intelligent automation and predictive maintenance to drive innovation enhance productivity and minimize downtime in their manufacturing processes Intelligent automation is widely considered to have the greatest potential for Industry 4.0 innovations for corporations Industrial machinery is increasingly being upgraded to intelligent machines that can perceive act evolve and interact in an industrial environment The innovative technologies featured in this machinery include the Internet of Things cyber physical systems and artificial intelligence Artificial intelligence enables computer systems to learn from experience adapt to new input data and perform intelligent tasks The significance of AI is not found in its computational models but in how humans can use them Consistently observing equipment to keep it from malfunctioning is the procedure of predictive maintenance Predictive maintenance includes a periodic maintenance schedule and anticipates equipment failure rather than responding to equipment problems Currently the industry is struggling to adopt a viable and trustworthy predictive maintenance plan for machinery The goal of predictive maintenance is to reduce the amount of unanticipated downtime that a machine experiences due to a failure in a highly automated manufacturing line In recent years manufacturing across the globe has increasingly embraced the Industry 4.0 concept Greater solutions than those offered by conventional maintenance are promised by machine learning revealing precisely how AI and machine learning based models are growing more prevalent in numerous industries for intelligent performance and greater productivity This book emphasizes technological developments that could have great influence on an industrial revolution and introduces the fundamental technologies responsible for directing the development of innovative firms Decision making requires a vast intake of data and customization in the manufacturing process which managers and machines both deal with on a regular basis One of the biggest issues in this field is the capacity to foresee when maintenance

of assets is necessary Leaders in the sector will have to make careful decisions about how when and where to employ these technologies Artificial Intelligence and Machine Learning for Industry 4 0 offers contemporary technological advancements in AI and machine learning from an Industry 4 0 perspective looking at their prospects obstacles and potential applications

The Power of Ideas Zhiyi Liu, 2022-12-08 As the first academic monograph that a Chinese scholar discusses the histories of thoughts and ideas related to the development of digital economics this book aims to make research from the perspective of the history of ideas and discuss the ideas influencing the development of digital economics and the evolution of related theories and thoughts with the methodology of interdisciplinary research The human society is in the stage of major historic transition and enters the digital world with the main goal of developing the artificial world In this world the development of digital economics is significantly characterized by the deep interaction between the real and the virtual worlds while the key triggering this paradigm reform is the evolution of ideas since the modern times While involving the field of computer these thoughts are also related to the fields of philosophy ethics communication and economics Therefore the results of the research on the history of ideas related to digital economics are required to really understand the depth of this discipline If computationalism is the most important paradigm evolution of natural science the most important paradigm evolution of social science is interdisciplinary complex science In the meantime this book is the most significant in understanding the nature of paradigm evolution related to the development of digital economics from the perspective of complex science and interdisciplinary systematic researches Digital economics is in the foundation laying phase while this book mainly aims to historically narrate the thoughts of this discipline and hopes that readers can understand the influence of ideas in the old era on shaping the disciplines in the new era while exploring this new discipline The construction of digital economics is a process of evolution This book will be helpful to understand the underlying logic of the ideas constructed by the thinkers in different fields

Proceedings of the 2024 3rd International Conference on Social Sciences and Humanities and Arts (SSHA 2024) Mohd Fauzi bin Sedon, Intakhab Alam Khan, Mehmet Cüneyt Birkök, KinSun Chan, 2024-06-20 This is an open access book With the progress of social civilization social science and its research are becoming more and more important Theoretically and practically the study of social phenomena and social problems and the development of prosperous social sciences are the eternal themes of human beings At present social science research and its results can hardly meet the needs of social development especially the unscientific evaluation of social science results which has aroused great concern from all walks of life and has produced dirt and questions on social science thus affecting the proper development of social science Max Weber once said that the most important function of social science in modern times is to keep people clear headed and to resist the delusions of prophetic legislators Humanities and arts are the process of perceiving realizing thinking manipulating and expressing objective or subjective objects through capturing and excavating feeling and analyzing integrating and applying or displaying the stage results in the form obtained through feeling seeing hearing smelling

touching The social sciences and humanities and arts contain content that will directly affect our lives and the way society functions And by reacting to today s increasingly intricate problems and situations through systematic and professional discussions they will further contribute to the improvement of institutions and the development of society By thinking about issues and looking at problems and the world from different perspectives by putting the two together it may be possible to have more comprehensive appropriate and better responses for example the development of laws requires a deeper understanding of the environment in which they are implemented international trade requires a certain understanding of the customs of different countries and the development of tax and economic policies requires a certain understanding of the population consumer demand etc
