A.I. Artificial intelligence, introduction to the issues and current trends Pavel Bartoš,2023-01-01 Artificial Intelligence AI often referred to by the acronym Artificial Intelligence is a fascinating and dynamically developing field that has far reaching implications for various sectors of human activity At its core it is the simulation of human intelligence in computer systems AI is capable of learning planning problem solving speech recognition visual perception and many other cognitive functions that were previously considered the exclusive domain of human thought *From Street-smart to Web-wise®* Al Marcella,Brian Moore,Madeline Parisi,2025-03-13 In Book 3 fifth and sixth graders are maturing becoming more independent and online activities are second nature From Street smart to Web wise A Cyber Safety Training Manual Built for Teachers and Designed for Children isn't just another book it's a passionate call to action for teachers It is a roadmap to navigate the digital landscape safely with confidence and care as the critical job of ensuring students safety as the digital world expands Written by authors who are recognized experts in their respective fields this accessible manual is a timely resource for educators This book helps us dive into engaging content that illuminates the importance of cyber safety not only in our classrooms but also in the global community Each chapter is filled with practical examples stimulating discussion points and ready to use lesson plans tailored for students in fifth and sixth grades Regardless of your technology skill level this book will provide you with the guidance and the tools you need to make student cyber safety awareness practical fun and impactful As parents partner with educators to create cyber secure spaces this book stands as a framework of commitment to that partnership It's a testament to taking proactive steps in equipping our young learners with the awareness and skills they need to tread the digital world securely By choosing From Street smart to Web wise A Cyber Safety Training Manual Built for Teachers and Designed for Children you position yourself at the forefront of educational guardianship championing a future where our children can explore learn and grow online without fear Join us on this journey to empower the next generation one click at a time *Advanced Topics in Computational Number Theory* Henri Cohen,2012-10-29 The computation of invariants of algebraic number fields such as integral bases discriminants prime decompositions ideal class groups and unit groups is important both for its own sake and for its numerous applications for example to the solution of Diophantine equations The practical completion of this task sometimes known as the Dedekind program has been one of the major achievements of computational number theory in the past ten years thanks to the efforts of many people Even though some practical problems still exist one can consider the subject as solved in a satisfactory manner and it is now routine to ask a specialized Computer Algebra System such as Kant Kash liDIA Magma or Pari GP to perform number field computations that would have been unfeasible only ten years ago The very numerous algorithms used are essentially all described in A Course in Computational Algebraic Number Theory GTM 138 first published in 1993 third corrected printing 1996 which is referred to here as CohO That text also treats other subjects such as elliptic curves

factoring and primality testing It is important and natural to generalize these algorithms Several generalizations can be considered but the most important are certainly the generalizations to global function fields finite extensions of the field of rational functions in one variable over a finite field and to relative extensions of number fields As in CohO in the present book we will consider number fields only and not deal at all with function fields *GOOD DIGITAL CITIZEN* Kori

Kastell, 2024-10-28 In a world where it takes just seconds or nanoseconds to connect, contact, communicate and comment in our shared online community, what will you show the world? In the 86,400 seconds that make up your day, what contributions will you make to the online global forum? Will your online interactions yield positive outcomes? Will they promote digital peace or digital peril? In *Good Digital Citizen: Everyday Ethics for an Intentional Digital Existence*, Kori Kastell navigates the complex landscape of our increasingly digital world, offering a thoughtful exploration of the ethical challenges and opportunities that come with technological advancements. As we stand at the dawn of the Fifth Industrial Revolution, where human strengths are expected to harmonize with innovations like AI and IoT, this book serves as a crucial guide for navigating the digital age with integrity and intention. Drawing on historical and philosophical insights, the author explores how principles from ancient times up to present-day thinkers can help us address these modern ethical dilemmas. *Good Digital Citizen* provides practical steps for managing information overload, setting boundaries for digital engagement, and maintaining emotional well-being through practices like Stoic scrolling. Kastell emphasizes the importance of truth and integrity in online interactions, urging readers to fact-check information and engage in empathetic communication, and highlights the need for heightened awareness and transparency around data privacy and user rights to promote greater digital justice. By embracing everyday ethics and striving for digital peace, we can create a more just, connected, and harmonious world as we move into the Fifth Industrial Revolution. The mission is yours, Digital Citizen, if you choose to accept it. *Post-Anthropocene Civic and Global Education Studies* Peter Appelbaum, 2024-10-08

This book explores community action within our more-than-human lifeworld, tackling post-Anthropocene challenges. It presents bold experiments, shifting from crisis study to asking, "How are we here?" It addresses key issues by moving beyond posthuman perspectives, integrating indigenous ways of being, resisting Doomer Culture, and rejecting blind Hopeism. Part 1 focuses on Post-Anthropocene Pedagogies from an Education Studies perspective. Part 2 illustrates the power of these pedagogies, while Part 3 delves into literature on Post-Anthropocene Education. Part 4 illustrates the approach via case studies of teaching, the development of an NGO, and community art projects. The narrative emphasizes maintaining a two-way flow between human culture and nature, highlighting porous boundaries. It argues that mere knowledge won't cure or save the world. Instead, it advocates for leadership and civic engagement that enrich reconnection with place and stewardship. The primary audience is within environmental education, sustainability studies, curriculum studies, post-human studies, sociology of education, and resource management as educational enterprise.
