Digital Access and Museums as Platforms Caroline Wilson-Barnao, 2021-07-25 *Digital Access and Museums as Platforms* draws on interviews with museum practitioners along with a range of case studies from public and private institutions in order to investigate the tensions and benefits involved in making cultural collections available using digital technologies. Taking a media and critical studies approach to the museum and raising questions about the role of privately owned search engines in facilitating museum experiences, the book questions who collects what, for whom, objects are collected, and what purpose these objects and collections serve. Connecting fieldwork undertaken in Australia and New Zealand with the global practices of technology companies, Wilson Barnao brings attention to an emerging new model of digital ownership and moderation. Considering the synergising of these institutions with media systems which are now playing a more prominent role in facilitating access to culture, the book also explores the motivations of different cultural workers for constructing the museum as a mediated location. *Digital Access and Museums as Platforms* will be of interest to academics and students working in the fields of museum studies, art, culture, media studies, and digital humanities. Weighing in on conversations about how technologies are being incorporated into museums, the book should also be useful to practitioners working in museums and galleries around the world.

Art, Media Design, and Postproduction Eduardo Navas, 2025-05-12 A concise guide to the creative application of appropriation and remix that offers a set of open-ended guidelines for art and design studio-based projects, this book explores creativity with emerging technology, including artificial intelligence. This fully revised and expanded second edition engages with the ongoing recycling and repurposing of content and form and the new directions the emerging form of metacreativity is taking. Art and design as artists continue to expand their creative methodologies. Exploration of metacreativity is new to this edition, with a focus on remix principles, the implementation of data analysis, and the delegation of parts of the creative process to automated algorithms and artificial intelligence. Each chapter includes an introduction, goals for guidelines of a studio-based project, with an explanation of relevant history as well as examples and case studies. Each set of guidelines is open-ended, enabling the reader to repurpose the instructional material according to their own methodologies and choice of medium. Navas also provides historical and theoretical context to encourage critical reflection. The second edition remains the first book of guidelines to take into account the historical, theoretical, and practical context of remix as an interdisciplinary act. This is an essential read for those interested in remix studies and appropriation in art, design, and media.
