Must Know Virtual Team Building Ideas For Teens:

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together. These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies. The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL. More generally, the theme of sense making is a central topic in information science. While many authors allude to these topics, few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making. This book presents a coherent research agenda that has been pursued by the author and his research group. The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field. The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project. These chapters are followed by several studies by international collaborators discussing the group discourse, the software affordances, and alternative representations of the interaction, all using data from the VMT project. The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences. In addition to substantial introductory and concluding chapters, this important new book includes analyses based upon the author's previous research, thereby providing smooth continuity and an engaging flow that follows the progression of the research. The VMT project has dual goals: a) to provide a source of experience and data for practical and theoretical explorations of group knowledge building, and b) to develop an effective online environment and educational service for collaborative learning of mathematics. Studying Virtual Math Teams reflects these twin orientations, reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service. It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse.

Screen-Smart Parenting Jodi Gold, 2014-10-17 As a practicing child psychiatrist and mother of three, Jodi Gold has a unique understanding of both the mind-boggling benefits and the serious downsides of technology. Dr. Gold weaves together scientific knowledge and everyday practical advice to help you foster your child's healthy relationship to technology from birth to the teen years. You'll learn how much screen time is too much at different ages, what your kids and teens are actually doing in all those hours online, how technology affects social, emotional, and cognitive development, which apps and games build smarts and let creativity shine, how your own media habits influence your children, what you need to know about privacy concerns, cyberbullying, and other dangers, ways to set limits that the whole family can live with.
