The Role of Norms and Electronic Institutions in Multi-Agent Systems Javier Vazquez-Salceda,2012-12-06 It is not the consciousness of men that defines their existence but on the contrary their social existence determines their consciousness Karl Marx In recent years several researchers have argued that the design of multi agent sys tems MAS in complex open environments can benefit from social abstractions in order to cope with problems in coordination cooperation and trust among agents problems which are also present in human societies The agent mediated electronic institutions e institutions for short is a new and promising field which focuses in the concepts of norms and institutions in order to pro vide normative frameworks to restrict or guide the behaviour of software agents The main idea is that the interactions among a group of software agents are ruled by a set of explicit norms expressed in a computational language representation that agents can interpret Such norms should not be considered as a negative constraining factor but as an aid that guides the agents choices and reduces the complexity ofthe environment making the behaviour of other agents more predictable

Coding, Cryptography and Combinatorics Keqin Feng,Harald Niederreiter,Chaoping Xing,2012-12-06 It has long been recognized that there are fascinating connections between cod ing theory cryptology and combinatorics Therefore it seemed desirable to us to organize a conference that brings together experts from these three areas for a fruitful exchange of ideas We decided on a venue in the Huang Shan Yellow Mountain region one of the most scenic areas of China so as to provide the additional inducement of an attractive location The conference was planned for June 2003 with the official title Workshop on Coding Cryptography and Combi natorics CCC 2003

Those who are familiar with events in East Asia in the first half of 2003 can guess what happened in the end namely the conference had to be cancelled in the interest of the health of the participants The SARS epidemic posed too serious a threat At the time of the cancellation the organization of the conference was at an advanced stage all invited speakers had been selected and all abstracts of contributed talks had been screened by the program committee Thus it was decided to call on all invited speakers and presenters of accepted contributed talks to submit their manuscripts for publication in the present volume Altogether 39 submissions were received and subjected to another round of refereeing After careful scrutiny 28 papers were accepted for publication

Constraint Satisfaction Techniques for Agent-Based Reasoning Nicoleta Neagu, 2005-01-28 Constraint satisfaction problems are significant in the domain of automated reasoning for artificial intelligence They can be applied to the modeling and solving of a wide range of combinatorial applications such as planning scheduling and resource sharing in a variety of practical domains such as transportation production supply chains network management and human resource management In this book we study new techniques for solving constraint satisfaction problems with a special focus on solution adaptation applied to agent reasoning

Organizational Principles for Multi-Agent Architectures Chris van Aart, 2004-12-15 1 1 Background In this work we develop a framework for the design of multi agent systems inspired by human organizational principles Organizations are complex entities formed to overcome various limitations of individual agencies such as cognitive physical temporal and institutional limitations There is a parallel between the complexity of organizations and multi agent systems Therefore we explore the use of concepts methods and techniques from human organizational design as architectural principles for multi agent systems Three research lines are presented organizational modeling and coordination interoperability and agent models Organizational modeling and coordination are concerned with how resources i.e. agents can be identified and related to each other In order to have agents cooperate several issues of interoperability have to be addressed Agent models deal with the design of individual intelligent software agents taking into account typical features of agent intelligence Every human activity raises two challenges division of labor and coordination Mintzberg 1993 Division of labor is the decomposition of work or goals into various distinct tasks Coordination refers to managing relations between these tasks to carry out the work The patterns of division of labor responsibilities people who do the work clustering of responsibilities into units and coordination between units can be defined by organizational structures Galbraith 1973 The design of an organization should cover how one or more actors are engaged in one or more tasks where knowledge capabilities and resources are distributed

Agent Technology and e-Health Roberta Annicchiarico, Ulises Cortes Garcia, Cristina Urdiales, 2008-04-05 Multi agent systems are one of the most exciting research areas in Artificial Intelligence This book reports on the results achieved in this area discusses the benefits and drawbacks that agent based systems may bring to medical domains and society and also provides a list of the research topics that should be tackled in the near future to make the deployment of health care agent based systems a reality Current topics of research

include communication and co operation between distributed intelligent agents to manage patient care *Analele științifice ale Universitatii "Al. I. Cuza" din Iași. Serie nouă* Universitatea "Al. I. Cuza" din Iași,2003 American Book Publishing Record ,2002 Deutsche Nationalbibliographie und Bibliographie der im Ausland erschienenen deutschsprachigen Veröffentlichungen ,2002-10 Das Schweizer Buch ,2003 *Web-Based Management of IP Networks and Systems* Jean-Philippe Martin-Flatin,2003 Building on the author s extensive experience in industry and government agencies this book proposes a general framework for integrating the management of networked systems in the IP world The Web based Integrated Management Architecture WIMA leverages XML s self description capability to integrate SNMP data and CIM objects in a seamless manner The first part of the book begins with a detailed analysis of SNMP it highlights its strengths and weaknesses and justifies the need for object oriented information models such as CIM Next the author summarizes the different paradigms considered in management research and industry in the past decade compares the suitability of different middleware solutions and concludes that with current technologies Web based management makes a lot of technical sense and is not just trendy The second part goes into software engineering detail and discusses tradeoffs for organizing manager to agent communication In WIMA agents publish the monitoring data and notifications they can send and management applications managers subscribe to them in a semi or fully automated way The same publish subscribe paradigm is used for manager to manager communication when managers are organized hierarchically to manage a large domain or different domains We explain why this solution decreases network overhead and improves scalability Security issues are also investigated The third part of the book presents the high level design of JAMAP a research prototype that implements the main components of the WIMA architecture Its code is freely available and released under the GPL license This prototype is currently being ported to Web Services Finally the author compares WIMA with SNMP WBEM CIM and JMX and concludes that WBEM could evolve into WIMA in the future This book is primarily aimed at software architects and engineers who design and write management applications It should also be of interest to administrators and people who are versed into management architectures
