Cyber Threats And Information Security Meeting The 21st Century Challenge Csis Reports:

Cyber Threats and Information Security Arnaud De Borchgrave, 2001 Security measures against cyber threats are insufficient throughout both government and the private sector To counter the cyber threats of the future the United States must develop a comprehensive response policy for thwarting all attacks on national infrastructures and assets be they within or outside of U S borders For this to happen government must not only lead by example It must also provide specific incentives that will encourage the private sector to better protect its own systems This report illuminates the problem and lays out the first essential steps for defending the homeland against this new reality

Homeland Security James J. F. Forest, 2006-06-30 America is a target the homeland is under threat While Americans have been targets of terrorist attacks for quite some time September 11 2001 awoke the nation to the reality that we are vulnerable in our homes our places of work and worship and our means of public transportation And yet we must continue to function as best we can as the world s most vibrant economic and political community The current threat environment requires greater engagement with the public as the necessary eyes and ears of the nation s homeland security infrastructure However to be effective the public must be equipped with the knowledge of where and why specific locations and activities may be a terrorist target what is being done to protect those targets and how they can help This three volume set answers that need The chapters of each volume of Homeland Security revolve around a core of central questions Are we safer today than we were pre 9 11 What steps have been taken in all these areas to protect ourselves What are the threats we face and what new threats have developed since 9 11 Are we staying one step ahead of those who wish to do us harm In 2002 more than 400 million people 122 million cars 11 million trucks 2 4 million freight cars and 8 million containers entered the United States Nearly 60 000 vessels entered the United States at its 301 ports of entry Clearly the amount of activity this represents will require a long term commitment to innovation organizational learning and public vigilance to complement an already overstretched network of government agencies and security professionals

Digital Underworld Richard Gissel, 2005 Presents an overview of the history of computer crime as well as case studies to show the affect various events had on shaping the views of computer crime in the United States

Computer Security John S. Potts, 2002 We live in a wired society with computers containing and passing around vital information on both personal and public matters Keeping this data safe is of paramount concern to all Yet not a day seems able to pass without some new threat to our computers Unfortunately the march of technology has given us the benefits of computers and electronic tools while also opening us to unforeseen dangers Identity theft electronic spying and the like are now standard worries In the effort to defend both personal privacy and crucial databases computer security has become a key industry A vast array of companies devoted to defending computers from hackers and viruses have cropped up Research and academic institutions devote a considerable amount of time and effort to the study of information systems and computer security Anyone with access to a computer needs to be aware of the developing trends and growth of computer

security To that end this book presents a comprehensive and carefully selected bibliography of the literature most relevant to understanding computer security Following the bibliography section continued access is provided via author title and subject indexes With such a format this book serves as an important guide and reference tool in the defence of our computerised culture *ICIW 2013 Proceedings of the 8th International Conference on Information Warfare and Security* Doug
