Cyberage Politics 101 Stephen E. Frantzich, 2002 Changes in lifestyles and technology have confronted modern American democracy with significant challenges Traditional geographic ties to communities and elected officials have been disrupted by physical mobility Democracy depends on active citizen involvement which requires information New technologies have changed the way individuals gather use and distribute information The traditional bases of community and collective knowledge that motivate and facilitate political involvement are under unintentional assault Citizens and political practitioners alike need to recognize these challenges and find ways to overcome them in a manner supportive of democracy

Simone Noveck draws on her experience in creating Peer to Patent the federal government's first social networking initiative to show how technology can connect the expertise of the many to the power of the few In the process she reveals what it takes to innovate in government Launched in 2007 Peer to Patent connects patent examiners to volunteer scientists and technologists via the web These dedicated but overtaxed officials decide which of the million plus patent applications currently in the pipeline to approve Their decisions help determine which start up pioneers a new industry and which disappears without a trace Patent examiners have traditionally worked in secret cut off from essential information and racing against the clock to rule on lengthy technical claims Peer to Patent broke this mold by creating online networks of self selecting citizen experts and channeling their knowledge and enthusiasm into forms that patent examiners can easily use Peer to Patent shows how policymakers can improve decisionmaking by harnessing networks to public institutions By encouraging coordinating and structuring citizen participation technology can make government both more open and more effective at solving today's complex social and economic problems Wiki Government describes how this model can be applied in a wide variety of settings and offers a fundamental rethinking of effective governance and democratic legitimacy for the twenty first century

Politics as Usual Michael Margolis, David Resnick, 2000-01-24 Cyberspace is no longer a mystery It has become irrevocably intertwined with everyday life facilitating everything from reading the news and paying the bills to ordering birthday presents We are in the midst of a revolution in mass communication and there now exists the technology for creating new forms of community empowering citizens and challenging existing power structures But will such changes occur In this fascinating book Michael Margolis and David Resnick ponder the effects of cyberspace on American Politics Our political system tends to normalize political activity and thus the Internet's vast potential could be lost rendering it just another purveyor of ignored information This broad examination begins with a history of cyberspace and moves through discussions of parties political interest groups candidates mass media information dissemination and commercial uses of the Internet *Politics as Usual* offers an innovative

and exciting look into previously ignored aspects of the Internet and American politics

Democracy in the Digital Age
Anthony G. Wilhelm, 2002-06-01 Democracy in the Digital Age is a fascinating philosophical exploration of how the emerging information and communication technologies are impacting political participation in the United States Rather than being the antidote to democratic ills the political conversations occurring online are neither inclusive nor deliberative suggesting that new technologies as currently designed and used are as much threats to progress as they are vehicles of progress Wilhelm finds that there is often an appearance of progress but negligible advancement of the human condition He discusses the four features of digitally mediated political life resources inclusiveness deliberation and design and demonstrates the need for a strong public policy

The Electronic Republic? Phillip J. VanFossen, Michael J. Berson, 2008 In 1991 Lawrence Grossman wrote that a new political system is taking shape in the United States As we approach the twenty first century America is turning into an electronic republic a democratic system that is vastly increasing the people's day to day influence on decisions of state Grossman's forecast implied a sea change in the way citizens would interact with and participate in their representative government a revamping of the way Americans would do citizenship Harnessing the power of technology to promote the ideal of democracy that first pulsed through our nation over 230 years ago may be a feasible achievement in a technocratic age but whether technology can help achieve a revolution as seismic as the political one that our founding fathers initiated may be a practical impossibility Fusing the power of technology and democratic ideals opens opportunities for greater access to information and offers a medium for people to be heard and express their voice with dissemination to the masses through digital tools such as blogs podcasts and wikis Indeed the emergence of the Internet as a nearly ubiquitous element of American society has brought about new opportunities to enhance citizen engagement in democratic politics and to increase the level of civic engagement among American citizens Despite such rhetoric however research has indicated that Grossman's electronic republic has for the most part failed to come to fruition

Accelerating Democracy
John O. McGinnis, 2012-12-09 How to adapt democracy to the accelerating pace of technological change and why it's critical that we do Successful democracies throughout history from ancient Athens to Britain on the cusp of the industrial age have used the technology of their time to gather information for better governance Our challenge is no different today but it is more urgent because the accelerating pace of technological change creates potentially enormous dangers as well as benefits Accelerating Democracy shows how to adapt democracy to new information technologies that can enhance political decision making and enable us to navigate the social rapids ahead John O McGinnis demonstrates how these new technologies combine to address a problem as old as democracy itself how to help citizens better evaluate the consequences of their political choices As society became more complex in the nineteenth century social planning became a top down enterprise delegated to experts and bureaucrats Today technology increasingly permits information to bubble up from below and filter through more dispersed and competitive sources McGinnis explains how to use fast evolving information technologies to

more effectively analyze past public policy bring unprecedented intensity of scrutiny to current policy proposals and more accurately predict the results of future policy But he argues that we can do so only if government keeps pace with technological change For instance it must revive federalism to permit different jurisdictions to test different policies so that their results can be evaluated and it must legalize information markets to permit people to bet on what the consequences of a policy will be even before that policy is implemented Accelerating Democracy reveals how we can achieve a democracy that is informed by expertise and social scientific knowledge while shedding the arrogance and insularity of a technocracy *The Electronic Republic* Lawrence K. Grossman,1995 An analysis of how the United States government originally founded to restrain the effects of direct democracy is affected by the technology which allows new scrutiny and new communications
