Cyclization Reactions:

Cyclization Reactions C. Thebtaranonth, Yodhathai Thebtaranonth, 1993-05-01 *Cyclization Reactions* provides a quick update of the latest advances in cyclization reactions. It covers the basic principles of cyclization chemistry emphasizing practical applications. Chapters are organized according to the different cyclization intermediates: cationic, radical, anionic, and metal complex intermediates. The last chapter covers macrolactonization, vicinal tricarbonals, and Bergman enediyne reactions, which are of particular interest today. More than 2 600 structures illustrate key concepts throughout the book. Various cyclizations are organized into mechanistic groups to help researchers choose and change between methods when searching for maximum efficiency in synthesis. Critical coverage of the literature up to 1992 is provided. *Cyclization Reactions* is essential reading for anyone involved in the synthesis of ring compounds or who is seeking a rapid overview of the field. Newcomers as well as experienced researchers will benefit from this book. It also is excellent reference material for students at the advanced undergraduate and graduate levels.

Handbook of Cyclization Reactions Shengming Ma, 2010. The ultimate and only reference source in this field. This handbook discusses the latest advances on the reactions leading to the formation of cyclic structures and includes chapters presenting the most synthetically attractive cyclization reactions. Leading chemists from around the world provide authoritative first hand information including experimental procedures that offer readers valuable practical information that is otherwise unavailable. An aid for every organic chemist in grasping and applying these new reactions. Publisher's website: *Handbook of Cyclization Reactions* Shengming Ma, 2010. Comprehensive Organic Synthesis: Additions to and substitutions at C-C[pi]-Bonds Barry M. Trost, 1991. Volume 4 focuses on additions and the resulting substitutions at carbon-carbon bonds. Part 1 includes processes generally considered as simple polar reactions: reactive electrophiles and nucleophiles adding to alkenes and alkynes. A major topic is Michael type addition to electron deficient bonds featured in the first six chapters. In part 2 are collected the four general processes leading to nucleophilic aromatic substitution including radical chain processes and transition metal activation through to complexation. Metal activated addition generally by nucleophiles to alkenes and polyenes is presented in part 3 including allylic alkylation catalyzed by palladium. The coverage of nonpolar additions in part 4 includes radical additions, organometal addition, Heck reaction, carbene addition, and 1,3-dipolar cycloadditions.
