Millstein, 2013-07-31 This volume addresses fundamental issues in the philosophy of science in the context of two most intriguing fields biology and economics Written by authorities and experts in the philosophy of biology and economics Mechanism and Causality in Biology and Economics provides a structured study of the concepts of mechanism and causality in these disciplines and draws careful juxtapositions between philosophical apparatus and scientific practice By exploring the issues that are most salient to the contemporary philosophies of biology and economics and by presenting comparative analyses the book serves as a platform not only for gaining mutual understanding between scientists and philosophers of the life sciences and those of the social sciences but also for sharing interdisciplinary research that combines both philosophical concepts in both fields The book begins by defining the concepts of mechanism and causality in biology and economics respectively The second and third parts investigate philosophical perspectives of various causal and mechanistic issues in scientific practice in the two fields These two sections include chapters on causal issues in the theory of evolution experiments and scientific discovery representation of causal relations
