Cytokines and Autoimmune Diseases Vijay K. Kuchroo, Nora Sarvetnick, David A. Hafler, Lindsay B.

Nicholson, 2001-11-09 Leading researchers synthesize scattered experimental data to help develop an intimate understanding of how cytokines and chemokines are involved in the pathogenesis of autoimmune diseases The many chapters offer critical reviews the basic mechanisms controlling cytokine induction and regulation as well as the resulting production of proinflammatory and anti inflammatory cytokines the former of which induces organ specific autoimmune diseases From the vantage of these insights they address the role of cytokines in a wide variety of autoimmune diseases uveitis encephalomyelitis multiple sclerosis human type 1 diabetes rheumatoid arthritis SLE and myasthenia gravis Authoritative and state of the art Cytokines and Autoimmune Disease highlights the enormous therapeutic potential of cytokine modulation in the treatment of autoimmune disease

Santamaria, Peter Hackett, 2013-05-14 This volume is ideal for individuals interested in taking an in depth look at how cytokines and chemokines participate in autoimmune disorders and how cytokines and chemokines can be used as targets for therapeutic intervention The outstanding features of this book are that it is divided in chapters each focusing on specific highly prevalent autoimmune disorders The role of cytokines and chemokines in each of these disorders is dissected in the context of the autoimmune responses that drive these diseases Importantly each chapter is meant to provide an in depth review of how cytokines and chemokines participate in each disease rather than very specific aspects of cytokine or chemokine biology The book therefore provides an integrated view of how multiple cytokines and chemokines participate in the initiation and evolution of both systemic and organ specific pathological immune responses

Cytokines in

Autoimmunity Fionula M. Brennan, Marc Feldmann, 1996-01-01 This book documents the current state of knowledge concerning cytokines in the pathogenesis of the spectrum of human autoimmune diseases Where appropriate animal models of autoimmune diseases are included for comparison This field has progressed so rapidly that it can no longer be mastered by a single group hence this multi authored compendium Cytokines are now widely acknowledged to be important targets for disease intervention as demonstrated by the success of anti TNFa antibody therapy in the treatment of rheumatoid arthritis

Interleukins Payam Behzadi, 2021-07-14 The immune system recruits a wide range of molecule groups and categories each of which has its own function property and structure Among these interleukins play a pivotal role in supporting the immune and non immune systems of the human body Interleukins as effective cytokines participate in different conditions such as homeostasis infectious diseases autoimmune diseases and cancers This unique property of interleukins makes them invaluable biomarkers that can be used as important biosensors This book is divided into three sections Interleukins Classification and Evolutionary Features Autoimmune Diseases and Low Immune System and Cancer and Injuries Chapters examine the role of various interleukins in conditions such as leukemia rheumatoid arthritis and allergic and autoimmune diseases

Signal Transduction Pathways in Autoimmunity Amnon Altman, 2002 The chapters included in this volume represent but a few examples of the close link between aberrant signaling pathways and autoimmune diseases They cover a variety of cells T B and myeloid monocytic cells receptors for antigen Fc and cytokines and intracellular signaling molecules kinases phosphatases adapters and transcription factors in the immune system This book brings together clinical and experimental aspects of autoimmune disease and the fundamental science of intracellular signaling pathways Therefore it should be of interest to clinical investigators of autoimmune diseases as well as to basic immunologists and cell biologists interested in the molecular basis of signal transduction in the immune system

Cytokine Frontiers Takayuki Yoshimoto, Tomohiro Yoshimoto, 2013-10-28 This book guides the reader through the latest research on the cytokine network covering signaling pathways control of the immune response and potential therapeutics Different cytokines stimulate diverse responses in various phases of inflammation and immunity including the innate immune response the generation of effector T cells and the development of antibodies by the humoral immune system It is now clear that the pathophysiology of many infectious autoimmune allergic and malignant diseases can be largely explained by which cytokines are induced and subsequently regulate the cellular responses In clinical medicine cytokines are involved in a wide spectrum of diseases This book describes in three parts the properties and roles of 15 key cytokines under physiological and pathological conditions Part I presents nine cytokines associated with inflammatory disorders pro inflammatory cytokines and the recently identified new helper T Th subset Th17 cells Part II gives details of three cytokines associated with allergic disorders including Th2 responses and recently identified types of innate cells Part III describes three cytokines that are associated with immunological tolerance and anti inflammation including regulatory T Treg cells IL 10 producing Treg Tr1 cells and inducible

IL 35 producing Treg iTr35 cells Cytokines are considered to be important as therapeutic targets for specific agonists or antagonists in numerous immune and inflammatory diseases The ultimate goal of this book is to facilitate the development of therapeutic treatments for such diseases which has been limited by an insufficient understanding of the biology of cytokines and the complicated network that they create **The Molecular Targets and Therapeutic Uses of Curcumin in Health and Disease** Bharat B. Aggarwal,Young-Joon Surh,S. Shishodia,2007-08-06 Curcumin is derived from the root of the plant *Curcuma longa* also called turmeric and its medicinal uses have been described for over 5000 years More than 1500 papers published within last half a century has revealed that curcumin has a potential in the treatment of wide variety of inflammatory diseases including cancer diabetes cardiovascular diseases arthritis Alzheimer psoriasis etc through modulation of numerous molecular targets This is the first monograph to deal specifically with this subject
