Layfield,2002 Cytopathology of Bone and Soft Tissue Tumors provides the practicing pathologist with a single reference for describing and illustrating the cytologic features of musculoskeletal tumors Using fine needle aspiration FNA the approach of this work is encyclopedic both relatively common and relatively rare lesions are depicted It is expected that Cytopathology of Bone and Soft Tissue Tumors will serve to widen the usage of the FNA technique which can substantially decrease patient morbidity lessen the complications that arise due to other biopsy techniques and shorten the time as well as expense required for diagnosis The chapters on soft tissue lesions are organized by direction of differentiation Each chapter documents both the common and uncommon lesions within the tissue group Summaries of clinical findings are given along with the histopathologic and cytologic description Key diagnostic points in tabular form and a discussion of the differential diagnosis complete each section The section on skeletal lesions is organized along predominant cell type seen in smears This approach facilitates grouping of lesions into diagnostically useful categories allowing the pathologist faced with an unfamiliar lesion to rapidly access the portion of the text most useful for differential diagnosis Within each chapter the organization is similar to that within the soft tissue chapters The introduction discusses technical concerns limitations of the technique and a diagnostic approach in both tabular and narrative form Information on grading of soft tissue sarcomas completes the introduction Cytopathology of Soft Tissue and Bone Tumors Steven I.
