   **Geometry and Representation Theory of Real and p-adic groups** Juan Tirao,David Vogan,Joe Wolf,2012-12-06 The representation theory of Lie groups plays a central role in both clas sical and recent developments in many parts of mathematics and physics In August 1995 the Fifth Workshop on Representation Theory of Lie Groups and its Applications took place at the Universidad Nacional de Cordoba in Argentina Organized by Joseph Wolf Nolan Wallach Roberto Miatello Juan Tirao and Jorge Vargas the workshop offered expository courses on current research and individual lectures on more specialized topics The present vol ume reflects the dual character of the workshop Many of the articles will be accessible to graduate students and others entering the field Here is a rough outline of the mathematical content The editors beg the indulgence of the readers for any lapses in this preface in the high standards of historical and mathematical accuracy that were imposed on the authors of the articles Connections between flag varieties and representation theory for real re ductive groups have been studied for almost fifty years from the work of Gelfand and Naimark on principal series representations to that of Beilinson and Bernstein on localization The article of Wolf provides a detailed introduc tion to the analytic side of these developments He describes the construction of standard tempered representations in terms of square integrable partially harmonic forms on certain real group orbits on a flag variety and outlines the ingredients in the Plancherel formula Finally he describes recent work on the complex geometry of real group orbits on partial flag varieties     Selected Papers on Harmonic Analysis, Groups, and Invariants Katsumi Nomizu,1997 The five papers originally appeared in Japanese in the journal Sugaku and would ordinarily appear in the Society s translation of that journal but are published separately here to expedite their dissemination They explore such aspects as representation theory differential geometry invariant theory and complex analysis No index Member prices are 47 for institutions and 35 for individual Annotation copyrighted by Book News Inc Portland OR     Geometric Aspects of Functional Analysis Bo'az Klartag,Shahar Mendelson,Vitali D. Milman,2012-07-25 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis from the years 2006 to 2011 continues the long tradition of the previous volumes which reflect the general trends of Asymptotic Geometric Analysis understood in a broad sense and are a source of inspiration for new research Most of the papers deal with various aspects of the theory including classical topics in the geometry of convex bodies inequalities involving volumes of such bodies or more generally logarithmically concave measures valuation theory probabilistic and isoperimetric problems in the combinatorial setting volume distribution on high dimensional spaces and characterization of classical constructions in Geometry and Analysis like the Legendre and Fourier transforms derivation and others All the papers here are original research papers     **D-Modules and Spherical Representations** Frédéric V. Bien,2014-07-14 The theory of D modules deals with the algebraic aspects of differential equations These are particularly interesting on homogeneous manifolds since the infinitesimal action of a Lie algebra consists of differential operators Hence it is possible to attach geometric invariants

like the support and the characteristic variety to representations of Lie groups By considering D modules on flag varieties one obtains a simple classification of all irreducible admissible representations of reductive Lie groups On the other hand it is natural to study the representations realized by functions on pseudo Riemannian symmetric spaces i e spherical representations The problem is then to describe the spherical representations among all irreducible ones and to compute their multiplicities This is the goal of this work achieved fairly completely at least for the discrete series representations of reductive symmetric spaces The book provides a general introduction to the theory of D modules on flag varieties and it describes spherical D modules in terms of a cohomological formula Using microlocalization of representations the author derives a criterion for irreducibility The relation between multiplicities and singularities is also discussed at length Originally published in 1990 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905  **Lie Theory** Jean-Philippe Anker,Bent Orsted,2006-02-25 Semisimple Lie groups and their algebraic analogues over fields other than the reals are of fundamental importance in geometry analysis and mathematical physics Three independent self contained volumes under the general title of Lie Theory feature survey work and original results by well established researchers in key areas of semisimple Lie theory Harmonic Analysis on Symmetric Spaces General Plancherel Theorems presents extensive surveys by E P van den Ban H Schlichtkrull and P Delorme of the spectacular progress over the past decade in deriving the Plancherel theorem on reductive symmetric spaces Well suited for both graduate students and researchers in semisimple Lie theory and neighboring fields possibly even mathematical cosmology it provides a broad clearly focused examination of semisimple Lie groups and their integral importance and applications to research in many branches of mathematics and physics Knowledge of basic representation theory of Lie groups as well as familiarity with semisimple Lie groups symmetric spaces and parabolic subgroups is required
