Cuvier Geoffrey Debate French Biology In The Decades Before Darwin:

The Cuvier-Geoffroy Debate Toby A. Appel, 1987 Explores the historical and scientific issues that made comparative anatomy central to 19th century biology and fostered the development of Darwin's theory of evolution **From DARKNESS to SUNRISE: One Man's Natural Epiphany** Theodore G. Obenchain, 2022-02-24 Martin Holmes grew up in rural Appalachia at a time when youngsters generally adhered to the strong religious and musical influences of the area His passion for the guitar was a given but religion was different With his many misgivings surrounding supernatural religion Martin began rebelling against rigid parental expectations Why should I have to listen to church authorities preaching about the supernatural They know little more about it than I Touring with country rock groups Martin experienced antipodal lifestyle changes a meteoric rise in musical talent matched by personal moral decline innocence to decadence With years of incessant travel he had become the libertine partying drugging drinking and womanizing After one prolonged international tour Martin returned from Seoul to LA preternaturally exhausted Sadly thirty six hours of sleep provided no relief Some debilitating mental state had set in He was miserable whether active or sitting inertly staring at the wall After failing professional treatment Martin embarked on his own arduous effort to solve his dilemma Seeking an approach outside of organized religion Martin posed the question How can two people of equal intelligence and education look at identical facts yet arrive at diametrically opposed positions rationality versus fabulism Pursuing this enigma led him not only down a natural path through the French philosophes but to an enlightened state embodied by such naturalists as Linnaeus Buffon and Darwin Each illuminated some aspect concerning organization within the universe Finally Martin had gained a sense of the depth of organization on the planet Every species occupies a unique regulatory niche As he comprehended the transcendence of it all Man's position within the life force his own niche within humanity his alienation his sense of isolation magically melted away He had seen the light and it was truly fulfilling *Charles Bell and the Anatomy of Reform* Carin Berkowitz, 2015-11-17 Sir Charles Bell was among the last of a generation medical men who formed their careers their research and their publications through the private classrooms of early nineteenth century London whose ambitions for reform were fundamentally about conserving something quintessentially British and whose politics were shaped by the exigencies of developing a living through various kinds of patronage in a time when careers in medical science simply did not exist Within a decade or two that world was gone Professionalization and regularized education the ambitions of reformers had been realized along with regular career paths With that change the classroom shattered its functions divided among other spaces each with its own audience and function the laboratory the clinic the classroom They are the spaces of modern medicine the ones we recognize today and we see them as the hallmark of medical science Through Bell's story artfully told by the author we witness medical science and medical reform in London's classrooms at a time when modern medicine with its practical universities with set curricula staffed by medical professionals was being born **Romantic**

Biology, 1890-1945 Maurizio Esposito, 2015-10-06 In this book Esposito presents a historiography of organicist and holistic thought through an examination of the work of leading biologists from Britain and America He shows how this work relates to earlier Romantic tradition and sets it within the wider context of the history and philosophy of the life sciences

Ruminating on Ruse Bradford McCall, 2025-06-19 Philosopher of biology Michael Ruse 1940 2024 was a leading voice in the science and religion debates of our times While himself a nonbeliever he contended that an informed and intelligent person can be perfectly religious even in this age of science He argued for a middle position with regard to matters of faith and science particularly with respect to evolutionary biology Ruse sought a more peaceful or irenic resolution to tensions between biology and religion than those offered by intelligent design Moreover he became a highly productive theorist of spirituality and values prior to his untimely death In this volume leading academics enter into critical but appreciative engagement with different areas of Ruse's scholarly work This is a perfect companion volume to *Reading Ruse* which it is designed to fit alongside

The Museum of Other People Adam Kuper, 2024-04-16 A MOST ANTICIPATED BOOK From one of the world's most distinguished anthropologists an important and timely work of cultural history that looks at the origins and much debated future of anthropology museums A provocative look at questions of ethnography ownership and restitution the argument Kuper makes in *The Museum of Other People* is important precisely because just about no one else is making it He asks the questions that others are too shy to pose Required reading *Financial Times UK* In this deeply researched immersive history Adam Kuper tells the story of how foreign and prehistoric peoples and cultures were represented in Western museums of anthropology Originally created as colonial enterprises their halls were populated by displays of plundered art artifacts dioramas bones and relics Kuper reveals the politics and struggles of trying to build these museums in Germany France and England in the mid 19th century and the dramatic encounters between the very colorful and eccentric collectors curators political figures and high members of the church who founded them He also details the creation of contemporary museums and exhibitions including the Smithsonian the Harvard's Peabody Museum of American Archaeology and Ethnology and the famous 1893 World's Columbian Exposition in Chicago which was inspired by the Paris World Fair of 1889 Despite the widespread popularity and cultural importance of these institutions there also lies a murky legacy of imperialism colonialism and scientific racism in their creation Kuper tackles difficult questions of repatriation and justice and how best to ensure that the future of these museums is an ethical appreciative one that promotes learning and cultural exchange A stunning unique accessible work based on a lifetime of research *The Museum of Other People* reckons with the painfully fraught history of museums of natural history and how curators anthropologists and museumgoers alike can move forward alongside these time honored institutions

The Evolutionary Dynamics of Complex Systems Charles Dyke, 1988 Dyke examines the controversial topics of sociobiology and evolution from scientific and philosophical perspectives At issue are the basic underpinnings of biology explanation determination teleology reductionism and hierarchy

The author proposes that progress in sociobiology and evolution is hindered by an outmoded philosophical view of science that does not adequately take into account recent advances in our understanding of basic biological processes. His goal is to shift the focus from a philosophical understanding based on observation from outside biology to a dynamic philosophically aware science.

An Agenda for Antiquity Ronald Rainger, 1991 Examines how and why vertebrate paleontology a relatively marginal field of scientific inquiry flourished at New York's American Museum of Natural History in the early 20th century. This text focuses on Henry Fairfield Osborn a prominent scientist who dominated paleontology in that era.

Appel, 1975 **The Cuvier - Geoffroy Debate and the Structure of 19th Century French Zoology** Toby A. Appel, 1984 **Discourse on the Revolutionary Upheavals on the Surface of the Globe and on the Changes which They Have Produced in the Animal Kingdom** Georges baron Cuvier, 2009

Georges Cuvier 1769-1832 was a brilliant influential and powerful figure in natural science in the early nineteenth century particularly famous for his work with the fossils of quadrupeds and his ability to reconstruct entire skeletal structures on the basis of a few fragments. Like many of his colleagues Cuvier opposed evolution and yet as a scientist he could not ignore the evidence of past extinctions. Thus he proposed that the history of the earth was characterized by a series of major calamities which had wiped out almost all creatures on the earth. The latest of these disasters occurred a few thousand years ago. The *Discourse on the Revolutionary Upheavals* was originally the introduction to an important book on quadruped fossils but its popularity soon led to its being printed and translated as a separate volume. In it Cuvier sets down an argument for his views on the history of the earth a position that has come to be known as Catastrophism. However the *Discourse* is more than a fascinating picture of the state of natural science in the years before Darwin's work for it offers an enormously wide ranging exploration of what we can learn about the history of human society from mythology astrology astronomy and literature from all of the world's cultures to which Cuvier had access. Ian Johnston's fluent new translation of this landmark in the history of science also includes Cuvier's essay *On the Ibis* in which Cuvier resolves a long dispute about the identity of this ancient bird.
