Cybernetics and the Environment Frank Honywill George, 1977 Cybernetics science and the environment The science of cybernetics Automation Cybernetics logic and society Artificial intelligence The dangers ahead **Cybernetics and the Constructed Environment** Zihao Zhang, 2024-07-24 Grounded in contemporary landscape architecture theory and practice Cybernetics and the Constructed Environment blends examples from art design and engineering with concepts from cybernetics and posthumanism offering a transdisciplinary examination of the ramifications of cybernetics on the constructed environment Cybernetics or the study of communication and control in animals and machines has grown increasingly relevant nearly 80 years after its inception Cyber physical systems sensing networks and spatial computing algorithms and intelligent machines create endless feedback loops with human and non human actors co producing a cybernetic environment Yet when an ecosystem is meticulously managed by intelligent machines can we still call it wild nature Posthumanism ideas such as new materialism actor network theory and object oriented ontology have become increasingly popular among design disciplines including landscape architecture and may have provided transformative frameworks to understand this entangled reality However design still entails a sense of intentionality and an urge to control How do we then address the tension between the designer s intentionality and the co produced reality of more than human agents in the cybernetic environment Is posthumanism enough to develop a framework to think beyond our all too human ways of thinking For researchers scholars practitioners and students in environmental design and engineering disciplines this book maps out a paradigm of environmentalism and ecological design rooted in non communication and uncontrollability and puts a speculative turn on cybernetics Chapters 8 and 9 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Ghosal, P. N. Murthy, 1993 Contributed papers **Cybernetics and the Philosophy of Mind** Kenneth Sayre, 2014-11-20 This book published in 1976 presents an entirely original approach to the subject of the mind body problem examining it in terms of the conceptual links between the physical sciences and the sciences of human behaviour It is based on the cybernetic concepts of information and feedback and on the related concepts of thermodynamic and communication theoretic entropy The foundation of the approach is the theme of continuity between evolution learning and human consciousness The author defines life as a process of energy exchange between organism and environment and evolution as a feedback process maintaining equilibrium between environment and reproductive group He demonstrates that closely related feedback processes on the levels of the behaving organism and of the organism s nervous system constitute the phenomena of learning and consciousness respectively He analyses language as an expedient for extending human information processing and control capacities beyond those provided by one s own nervous system and shows reason to be a mode of processing information in the form of concepts removed from immediate stimulus control The last chapter touches on colour vision pleasure and pain intentionality self awareness and other subjective phenomena Of special interest to the communication theorist and philosopher this study is also of interest to psychologists and anyone interested in the connection between the physical and life sciences **Economic Computation and Economic Cybernetics Studies and Research**, 1986 *Applied Systems and Cybernetics* G.
