Introduction to Computer Simulations for Integrated STEM College Education M. M. Hafez, William Edward Tavernetti, 2019 This book is written to introduce computer simulations to undergraduate college students freshmen to seniors in STEM fields. The book starts with concepts from Basic Mathematics Geometry Algebra and Calculus. Properties of Elementary Functions Polynomials Exponential Hyperbolic and Trigonometric Functions are studied and simple differential equations representing these functions are derived. Numerical approximations of first and second order differential equations are studied in terms of finite differences on uniform grids. Computer solutions are obtained via recursive relations or solutions of simultaneous algebraic equations. Comparisons with the exact solutions known a priori allow the calculations of the error due to discretization. After the students build confidence in this approach more problems where the solutions are not known a priori are tackled with applications in many fields. Next the book gradually addresses linear differential equations with variable coefficients and nonlinear differential equations including problems of bifurcation and chaos. Applications in Dynamics Solid Mechanics Fluid Mechanics Heat Transfer Chemical Reactions and Combustion are included. Biographies of 50 pioneering mathematicians and scientists who contributed to the materials of the book are briefly sketched to shed light on the history of these STEM fields. Finally the main concepts discussed in the book are summarized to make sure that the students do not miss any of them. Also references for further readings are given for interested readers.

Gilbert,2012-12-06 What is it about the structure and organisation of science and technology that has led to the spectacularly successful growth of knowledge during this century This book explores this important and much debated question in an innovative way by using computer simulations The computer simulation of societies and social processes is a methodology which is rapidly becoming recognised for its potential in the social sciences This book applies the tools of simulation systematically to a specific domain science and technology studies The book shows how computer simulation can be applied both to questions in the history and philosophy of science and to issues of concern to sociologists of science and technology Chapters in the book demonstrate the use of simulation for clarifying the notion of creativity and for understanding the logical processes employed by eminent scientists to make their discoveries The book begins with three introductory chapters The first introduces simulation for the social sciences surveying current work and explaining the advantages and pitfalls of this new methodology The second and third chapters review recent work on theoretical aspects of social simulation introducing fundamental concepts such as self organisation and complexity and relating these to the simulation of scientific discovery

*Computer Simulation* Dragan Cvetković,2017-06-07 The first chapter provides an overview of the development of a novel agent based simulation model of socio environmental innovation diffusion The second chapter shows the study about rendering of colours with three rendering engines The third and fourth chapters are devoted to modelling clothes at different levels The fifth chapter describes the modelling of computer simulation in the optimization of bioprocess technology Chapters 6 and 7 formulate a physical model of deformation of steel and idea of constructing a scientific workshop focused on high temperature processes Chapter 8 formulates surrogate models Chapter 9 shows computer simulation of high frequency electromagnetic fields Chapter 10 proposes the modelling of the task allocation problem by the use of Petri Nets Chapter 11 presents various scenarios whose ranking is done according to defined criteria and weight coefficients

*Computer Simulation Applications* Marcia Lynn Whicker, Lee Sigelman,1991-03 The

book provides a clear exposition of much that is relevant to simulation. The authors then focus on the elements of computer simulation namely the assumptions upon which simulation is built parameters inputs or independent variables algorithms or process decision rules and outputs or dependent variables. Each of these facets and the extent to which they need to be fully appreciated if simulation is to prove successful is treated with care and clarity. Chapter 2 is particularly well written and is exactly the type of treatment that should be included in any graduate course on applied social research methods. Overall this is a book which many among the community of systems practitioners will find worthwhile reading. Systems Practice It is a readable book and as intended is easily accessible for the novice. The purpose and process of simulation modelling are described in brief but clear terms and are illustrated by the three well chosen examples Telephone Surveys. This book is a good place to begin one's education in the potential for using computer simulations in theory building and policy analysis. As with any good book it will whet your appetite and raise almost as many questions as it answers. Social Science Computer Review Computer simulation represents one of the fastest growing areas for conducting research in the social sciences. Now in Computer Simulation Applications Marcia Lynn Whicker and Lee Sigelman show you how simulations can be used to analyze social systems for the purposes of theory building and policy analysis. They discuss the strengths and weaknesses of computer simulations as a research method and outline the various steps involved in designing a simulation model. In addition they provide practical suggestions on how to use a simulation model to test hypotheses how to evaluate and validate a model and the relative advantages of general purpose programming languages versus specialized sensitivity testing. If you are currently conducting or considering computer simulations in your research then this volume is a must for your professional toolkit.
