Algebraic Function Fields and Codes Henning Stichtenoth, 2008-11-20 This book links two subjects algebraic geometry and coding theory It uses a novel approach based on the theory of algebraic function fields Coverage includes the Riemann-Roch theorem zeta functions and Hasse-Weil's theorem as well as Goppa's algebraic geometric codes and other traditional codes It will be useful to researchers in algebraic geometry and coding theory and computer scientists and engineers in information transmission

The Arithmetic of Dynamical Systems J.H. Silverman, 2010-05-05 This book is designed to provide a path for the reader into an amalgamation of two venerable areas of mathematics Dynamical Systems and Number Theory Many of the motivating theorems and conjectures in the new subject of Arithmetic Dynamics may be viewed as the transposition of classical results in the theory of Diophantine equations to the setting of discrete dynamical systems especially to the iteration theory of maps on the projective line and other algebraic varieties Although there is no precise dictionary connecting the two areas the reader will gain a flavor of the correspondence from the following associations Diophantine Equations Dynamical Systems rational and integral rational and integral points on varieties points in orbits torsion points on periodic and preperiodic abelian varieties points of rational maps There are a variety of topics covered in this volume but inevitably the choice reflects the author's tastes and interests Many related areas that also fall under the heading of arithmetic or algebraic dynamics have been omitted in order to keep the book to a manageable length A brief list of some of these omitted topics may be found in the introduction Online Resources The reader will find additional material references and errata at <http://www.math.brown.edu/jhs/ADSHome.html> Acknowledgments The author has consulted a great many sources in writing this book Every attempt has been made to give proper attribution for all but the most standard results

Field Theory Steven Roman, 2013-12-20 Intended for graduate courses or for independent study this book presents the basic theory of fields The first part begins with a discussion of polynomials over a ring the division algorithm irreducibility field extensions and embeddings The second part is devoted to Galois theory The third part of the book treats the theory of binomials The book concludes with a chapter on families of binomials the Kummer theory

A Course in Computational Algebraic Number Theory Henri Cohen, 1993 Describes 148 algorithms that are fundamental for number theoretic computations including computations related to algebraic number theory elliptic curves primality testing and factoring A complete theoretical introduction is given for each subject reducing prerequisites to a minimum The detailed description of each algorithm allows immediate

theory algebra and algebraic geometry Introduction to Elliptic Curves and Modular Forms Neal Koblitz, 1984 The theory of elliptic curves and modular forms provides a fruitful meeting ground for such diverse areas as number theory complex analysis algebraic geometry and representation theory This book starts out with a problem from elementary number theory and proceeds to lead its reader into the modern theory covering such topics as the Hasse Weil L function and the conjecture of Birch and Swinnerton Dyer The second edition of this text includes an updated bibliography indicating the latest dramatic changes in the direction of proving the Birch and Swinnerton conjecture It also discusses the current state of knowledge of elliptic curves Number Theory II A. N. Parshin, Игорь Ростиславович Шафаревич, 1992 Volume 62 of the Encyclopedia presents the main structures and results of algebraic number theory with emphasis on algebraic number fields and class field theory Written for the nonspecialist the author assumes a general understanding of modern algebra and elementary number theory Only the general properties of algebraic number fields and relate **Quantum Groups** Christian Kassel, 1995 This book provides an introduction to the theory of quantum groups with emphasis on the spectacular connections with knot theory and on Drinfeld s recent fundamental contributions The first part presents in detail the quantum groups attached to SL_2 as well as the basic concepts of the theory of Hopf algebras Part Two focuses on Hopf algebras that produce solutions of the Yang Baxter equation and on Drinfeld s quantum double construction In the following part we construct isotopy invariants of knots and links in the three dimensional Euclidean space using the language of tensor categories The last part is an account of Drinfeld s elegant treatment of the monodromy of the Knizhnik Zamolodchikov equations culminating in the construction of Kontsevich s universal knot invariant **Journal of the Mathematical Society of Japan** Nihon Sūgakkai, 2006 Representations of Compact Lie Groups Theodor Bröcker, Tammo tom Dieck, 1985 *Proceedings of the Japan Academy* Nihon Gakushin, 2005 Algebraic Numbers - II.
