Multiple Organ Failure Arthur E. Baue, Eugen Faist, Donald Fry, 2000-06-08 Inflammation in itself is not to be considered as a disease and in disease where it can alter the diseased mode of action it likewise leads to a cure but where it cannot accomplish that solitary purpose it does mischief John Hunter A Treatise on the Blood ITflammation and Gunshot Woundr London 1794 1 As we reached the millennium we recognized the gap between our scientific knowledge of biologic processes and our more limited clinical capabilities in the care of patients Our science is strong Molecular biology is powerful but our therapy to help patients is weaker and more limited For this reason this book focuses on the problems of multiple organ failure MOF multiple organ dysfunction syndrome MODS and systemic inflammatory response syndrome is patients who have severe injuries require major SIRS in high risk patients that overwhelming operations or have serious illnesses requiring intensive care patients who have diseases elsewhere in other organs or systems that limit their capabilities to survive a new insult and patients who are elderly or at high risk for sepsis or other complications These are the patients who need our help They need the advances in science in molecular biology immunology pathophysiology biochemistry genetics high technology and other areas of maximum support at the bedside These advances could potentially have the greatest impact on improving patient care

The Brain and Host Defense ,2009-12-24 It is now well recognized that the brain and especially the hypothalamus plays an important role in the regulation of immune reactions and inflammation This book aims to review our current state of knowledge of this important field Key historical findings are presented and the reciprocal interactions between the brain and the immune system are examined Particular emphasis is placed on inflammation a critical host defense reaction that serves as an effector response for both the adaptive and innate immune systems Mechanisms implicated in brain defense as well as in more general host defense are discussed The regulatory influences of the brain on inflammatory responses are included with particular reference to the role of the hypothalamus which is also the main director the hormonal regulation of immune inflammatory Gender related differences in immune responsiveness circadian modulator of immune responses and evidence that behavioral conditioning e g reward of immune responses is possible are used as examples to reinforce the notion that the neuroendocrine system exerts a fundamental and complex regulatory influence on the immune system Presents timely issues such as immunological aspects of the blood brain barrier and the role of inflammatory mediators in the evolution of strokes and degenerative diseases Includes analysis of the role of the brain in the adaptive responses to disease Evaluates the argument that further knowledge of the influence of the brain on the immune system will provide new insights to the pathophysiology infectious and
