Cytoskeleton And Small G Proteins:

Cytoskeleton and Small G Proteins Philippe Jeanteur, 2012-12-06 The internal structure of a cell can be affected by signals in the form of small molecules outside the cell These changes can then alter the shape or adhesiveness of the cell This volume centers particularly on one family of cellular proteins which transmit these signals the Rho Ras like GTPases and examines their role in normal cellular processes and development Also discussed are their roles in cancer formation and microbial pathogenesis

Signaling and the Cytoskeleton Kermit L. Carraway, Coralie A. C. Carraway, Kermit L. III Carraway, 2013-03-09 This monograph explores the relationships between cell signaling and the cytoplasmic cytoskeleton in fundamental cell processes thus bridging the gap between two very active aspects of molecular cell biology It covers the two main and reciprocal questions of these relationships How are structure and function of the cytoskeleton affected by external signals which impinge on the cell How does the cytoskeleton influence the cellular signaling processes which determine cell behavior

G Proteins, Cytoskeleton, and Cancer Hiroshi Maruta, Kazuhiro Kohama, 1998 Building upon the pioneering work of Klaus Weber who in the 1970s discovered a key to the malignant transformation of normal cells by tumor virus infection or mutations via the disruption of actin cables and subsequent induction of membrane ruffling occurring with oncogenes such as v Ras and v Src the global contributors aim toward the quantum leap of creating an anticancer Holy Grail that would attenuate the malignant activity of oncogenic mutants The two dozen papers are organized under the four major headings of actin cytoskeleton Ras Rho family GTPases links between G proteins and actin and new anticancer drugs e g farnesyltransferase inhibitors SCH51344 and azatyrosine Annotation copyrighted by Book News Inc Portland OR

Müller-Taubenberger, 2022-08-16 Textbook of Cell Signalling in Cancer Jacques Robert, 2015-02-17 This book provides a simplified yet comprehensive overview of the signalling pathways operating between and inside cells which will help younger oncologists find their way in the labyrinth of signalling pathways and in the multitude of signals and signal receptors transducers and effectors that contribute to oncogenesis This comprehensive reference text is based on the master's courses delivered by Prof Jacques Robert to graduate students at the University of Bordeaux France It includes a large number of colour schemas and figures that have been improved year after year for educational purposes Signalling pathways are described individually and in depth but without ignoring the multiplicity of interconnections and crosstalk The presentation of each pathway is followed by a brief description of the alterations found in cancers as well as of the targeted pharmacological approaches that can be used to prevent or overcome the consequences of these oncogenic alterations The basic mechanisms of molecular biology at the DNA replication RNA transcription and protein activity levels are presented in

Mayer,2024-10-30 Cell Signaling provides undergraduate and graduate students with the conceptual tools needed to make sense of the dizzying array of pathways that cells use to detect process and respond to signals from the environment By emphasizing the common design principles and molecular processes that underlie all signaling mechanisms the book develops a broad conceptual framework through which students can understand diverse signaling pathways and networks The book first examines the common currencies of cellular information processing and the core components of the signaling machinery It then shows how these individual components link together into networks and pathways to perform more sophisticated tasks Many specific examples are provided throughout to illustrate common principles and to provide a comprehensive overview of major signaling pathways Thoroughly revised this second edition includes two new chapters and substantial updates to the text and figures throughout the book Key features The book provides a conceptual framework through which all signaling pathways can be understood without memorization of details It is extensively illustrated including high quality diagrams and schematics to elucidate important concepts and processes Each chapter concludes with a useful summary section that brings together the key concepts End of chapter review questions test the reader s understanding of the material covered Two new chapters have been written especially for this edition Signaling and Disease and Diversity in Signaling across Phylogeny Primary Immunodeficiency Diseases Hans D.
